1 REM CONFIGURATION

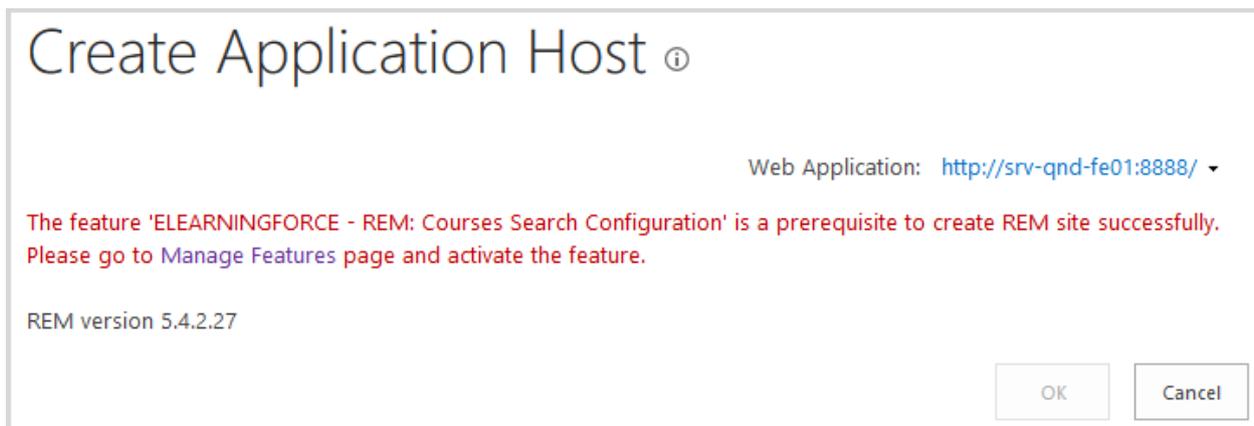

After the installation has been completed successfully, REM must be configured.

1.1 Create REM Application Host

'**ELEARNINGFORCE - REM: Courses Search Configuration**' feature is a prerequisite for creating REM host site collection. It is a web application scoped feature that ensures (creates if not exist) needed crawled properties, managed metadata properties and term store group. The system attempts to activate it automatically during product installation.

NOTE: At least one site collection must be available on the web application hosting SharePoint LMS in order for this feature to be activated successfully.

However, if any problems are met during activation of it you will see a warning when you go to Central Administration > Application Management > Create Application Host page:

NOTE: If you meet problems with activating 'ELEARNINGFORCE – REM: Courses Search Configuration' feature, make sure the user who activates it has permissions to create a term store group in Managed Metadata Service, else you will get the unauthorized exception while activating the feature. To verify that go to Central Administration > Application Management > Manage Service Applications>Manage Metadata Service > Term Store Administrators and check that your user has admin rights here. During the feature activating user can also get exception like: *DefaultSiteCollectionTermStore is null please configure it before activating the feature.* It could be caused by reasons described [here](#) and [here](#).

To create REM Site Collection, do the following:

1. Go to Central Administration > Application Management > Create Application Host:

ELEARNINGFORCE – SharePoint REM
[Create Application Host](#) | [Manage Application Host](#) | [Delete Application Host](#)

2. Complete the open form:

- *Title and Description* – type the title and enter the short description:

Title and Description

Type a title and description for your new site. The title will be displayed on each page in the site.

Title:

Description:

- *Web Site Address* – type the unique site address:

Web Site Address

Specify the URL name and URL path to create a new site, or choose to create a site at a specific path.

URL:

To add a new URL Path go to the [Define Managed Paths](#) page.

- *Primary Users Accounts Source* – select configuration for primary users accounts source: FBA Membership Provider or Active Directory:

Primary Users Accounts Source

One or more zones of the web application configured for the Forms and Windows authentication and option allows to choose primary configuration that will be selected during the creation of users by REM.

Available Configurations

FBA Membership Provider

Active Directory

- *SharePoint LMS Organization* – select an organization for courses synchronization with REM site collection:

SharePoint LMS Organization

Select the organization for courses synchronization.

Organization:

- a) In the Organization section, click Add Organization;

b) In the open dialog box, select an organization from the list, and then click OK.

- *SharePoint CCM Host* – select the CCM Host for synchronization with REM site collection:

SharePoint CCM Host
Select the CCM host.

CCM Host: ccm ▼

Change CCM Host

- *CCM to REM Synchronization Settings* – select whether you want to synchronize people from 'Manager' and 'HR responsible' fields of CCM profiles to SharePoint groups 'Line Managers' and 'HR responsible' respectively:

CCM to REM Integration Settings

Enable Synchronization of Managers from CCM Host:

Yes (allow removing users)
 Yes (don't allow removing users)
 No

Enable Synchronization of HR Responsibles from CCM Host:

Yes (allow removing users)
 Yes (don't allow removing users)
 No

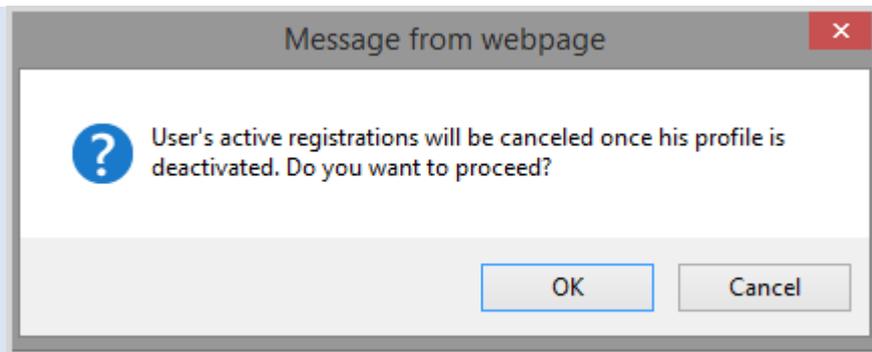

Cancel associated registrations when CCM profile is deactivated.

The synchronization is handled by 'ELEARNINGFORCE - REM: Managers synchronizer job' and scheduled to run hourly by default.

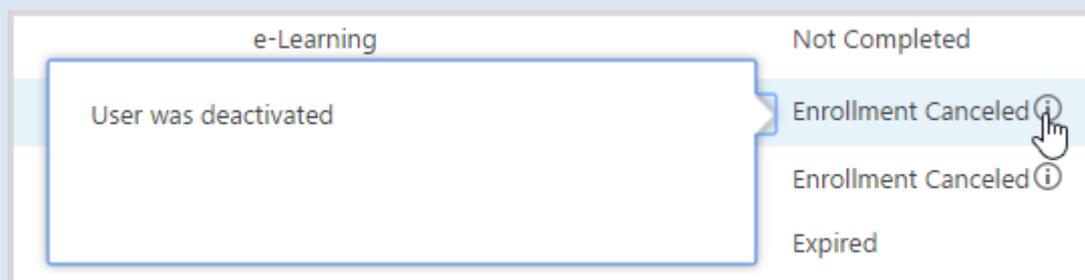

NOTE:	ELEARNINGFORCE – REM: Managers synchronizer job does not synchronize managers from Relationships list to REM Line Managers group. They are added to Dashboard Managers group and REM Line Managers group manually.
NOTE:	Managers and HR Responsibles with deactivated CCM profiles are not synchronized to REM SharePoint groups.

- *Cancel associated registrations when CCM profile is deactivated* – select the checkbox if you want to cancel associated active user's registrations (i.e. registrations with 'Enrolled', 'Wait For Approval', 'Waiting For Start', and 'In Waiting List' statuses) when his CCM profile is deactivated;

NOTE:	Whilst deactivating user's CCM profile, you will see the following warning message:
--------------	-------------------------------------------------------------------------------------

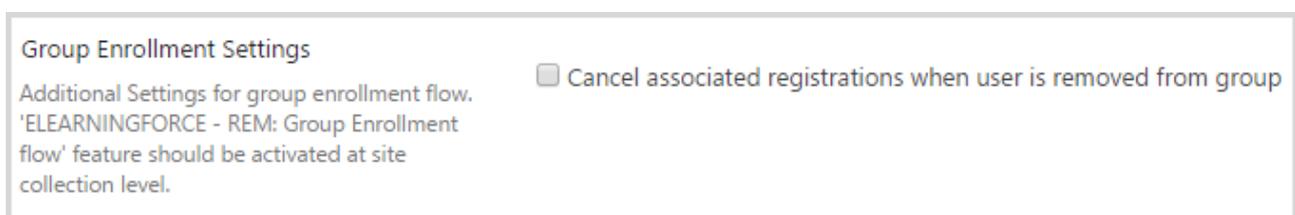

Click OK button to deactivate user's CCM profile and cancel his registrations. Now all active user's registrations will have 'Canceled' status and on the Dashboard's My Training Overview, a cancellation message will appear:

Remember that if you make user's CCM profile active again, his cancelled registrations will not change the status.

- *Group Enrollment Settings* – select the checkbox to cancel associated registrations when user is removed from group (user's active registrations (i.e. registrations with 'Enrolled', 'Wait For Approval', 'Waiting For Start', and 'In Waiting List' statuses) that were created by Group Enrollments job will be canceled). Note that 'ELEARNINGFORCE – REM: Group Enrollment flow' feature must be first activated at the site collection level:

NOTE: When user that was removed from group and his registrations were canceled by Group Enrollments job is added back to the group, new registrations are created for him (after Group Enrollments timer job has run).

- *Active Directory Source Settings* – configure active directory for user's source; this configuration will be saved to the *web.config* file and used for creation of users in AD:

NOTE: In FBA case default membership provider will be used for creation and storing new users.

- *Disable the User Account Registration Feature* – select the checkbox to disable the fields below: if the check box is selected, ONLY the authorized users can enroll in courses. Clear the check box to allow anonymous users to enroll;
- *Organizational Unit* – select the Organization Unit that will contain new users created by REM;
- *Login name* – enter full login name of the user who has an access to Organization Unit (should be in the following format: *domain\username*). Make sure that the specified user has rights to add, edit and delete users from current Organization Unit;
- *Password* – type in the password for the user and select the checkbox if you want to allow the user to change it:

Active Directory Source Settings
Allows changing the AD settings for user management.

Options for anonymous users:
 Disable the User Account Registration Feature

Organizational Unit: No selection [Clear](#)

Login name:

Password:

Allow users to change their password using the REM Change Password feature

Important: One or more zones of web application configured for the Forms authentication. If you will use REM only with Forms authentication you can leave Active Directory settings fields blank.

You can export Organizations and Active Directory configurations:
[Export Config](#)

- *Import Config* – import Organizations and Active Directory configuration from the xml-file on your local computer;
- *Reporting Center Database* – configure local settings at REM site collection level (if in SharePoint Reporting Center settings 'use web application scope' is not selected):

Reporting Center Database

Please specify database settings to allow Reporting Center to store information.

Database Server

Database Name

Database authentication

Windows authentication (recommended)

SQL authentication

Account

Password

- Specify the primary and secondary site collection administrators:

Primary Site Collection Administrator

Specify the administrator for this site collection. Only one user login can be provided; security groups are not supported.

User name:

Secondary Site Collection Administrator

Optionally specify a secondary site collection administrator. Only one user login can be provided; security groups are not supported.

User name:

- *Language* – from the drop-down list select the language for your REM; the selection depends on the language packs installed:

Language

Specify the language for this Web site collection

Select a language:

Quota Template

Select a predefined quota template to limit resources used for this site collection.

To add a new quota template, go to the [Manage Quota Templates](#) page.

Select a quota template:

3. Click OK to finish creating REM site collection. You will get the “*REM Site Collection Successfully Created*” message.

NOTE: To be able to use the SharePoint date picker functionality, users should have access to the root site collection. Otherwise users will receive the 'Access Denied' message when trying to use a date picker.
Due to this reason it is recommended to add all users to the 'Root Site Visitors' group on the top-level site after REM Site Collection creation.

NOTE: When Central Administration is hosted on a dedicated server 'ELEARNINGFORCE – REM: Publishing' feature cannot be activated during creation of REM Application Host. In this case a warning is displayed that REM Publishing feature should be activated manually after site is created:

 The feature 'ELEARNINGFORCE - REM: Publishing' cannot be activated on the REM site because of 'Microsoft SharePoint Foundation Web Application' service is not active on the current server. You have to activate the feature manually right after the site has been created.

When you go to the REM host site collection you will see information message about that:

 **Information** 'ELEARNINGFORCE - REM: Publishing' is not activated. The feature is a prerequisite for successful work of REM.

Go to Site Settings > Manage site collection features and activate 'ELEARNINGFORCE – REM: Publishing' feature.

1.1.1 My Dashboard

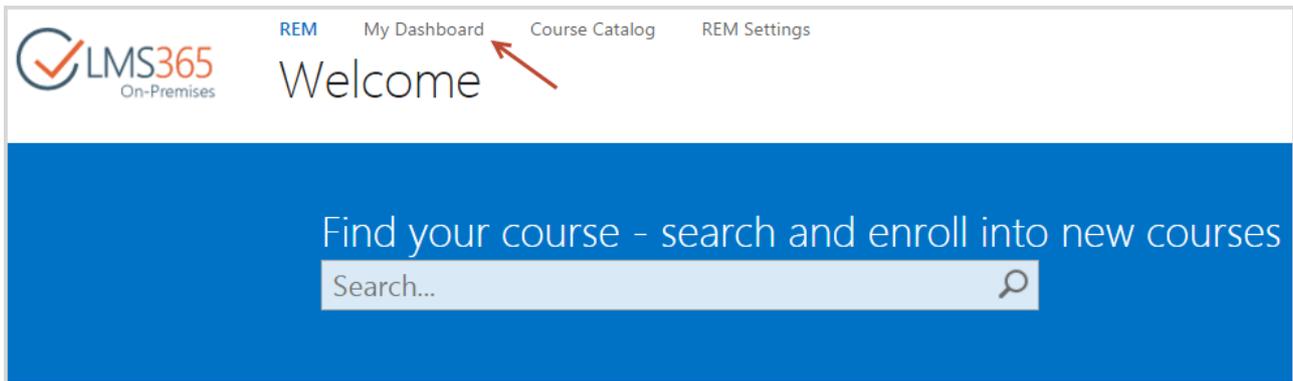

My Dashboard is a subsite of REM site collection depending on the ELEARNINGFORCE – Dashboard: REM Integration site collection feature:

	<p>ELEARNINGFORCE - Dashboard: REM Integration Creates Dashboard sub site and navigation items.</p>	Deactivate	Active
-------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------	------------	--------

NOTE: For automatic creation of My Dashboard subsite, Dashboard solution is required to be installed prior to SharePoint REM installation.

NOTE: Please remember that all changes (e.g changes made to the subsite navigation; custom pages and elements) will be reverted to default each time you reactivate ELEARNINGFORCE – Dashboard: REM Integration site collection feature.

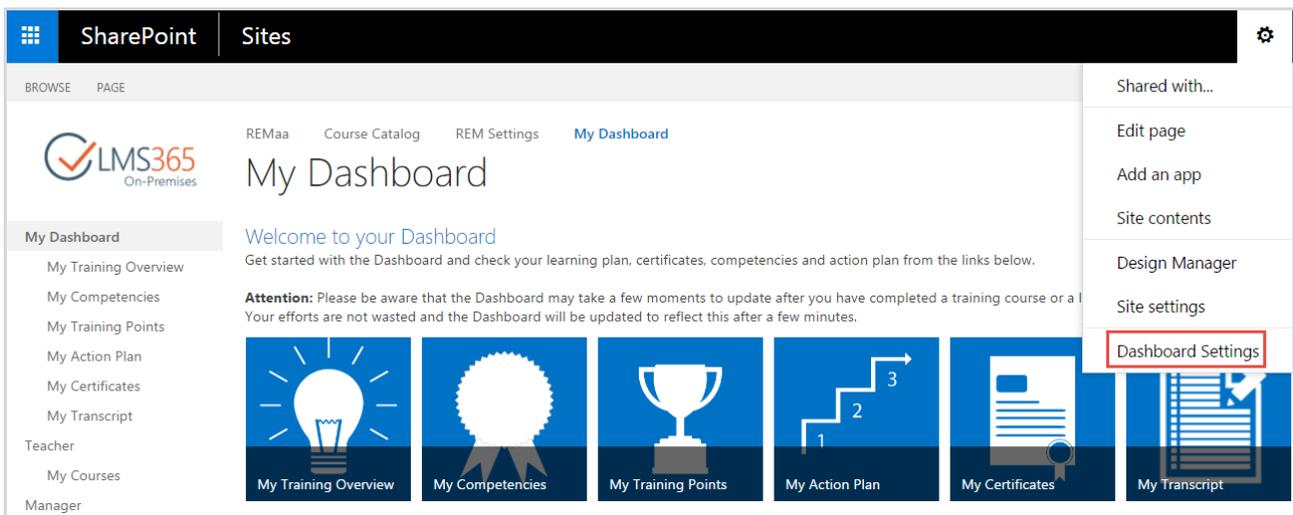

Link to My Dashboard subsite is displayed in the global navigation:

My Dashboard functionality replaces and enhances the old functionality of “My Pages”. It provides Learners, Teachers and Administrators with tools for quick overview and management of the learning process. For more detailed information see [LMS365 On-Premises 4.8 REM User Guide](#).

1.1.2 Dashboard Settings

To configure settings of the created Dashboard site, go to My Dashboard > Settings > Dashboard Settings:

This section displays connections to other ELEARNINGFORCE products and provides the ability to configure Groups, Profile and Manager Settings:

Show all users

Show tree of staff

SharePoint Competencies and Certifications Host and SharePoint Learning Management System Organizations are resolved automatically from SharePoint REM host.
 Groups section allows assigning Manager and Teacher permissions to any group on the site:

Profile settings include the possibility to take profile information from SharePoint or CCM. To select information for display in Profile select corresponding check boxes:

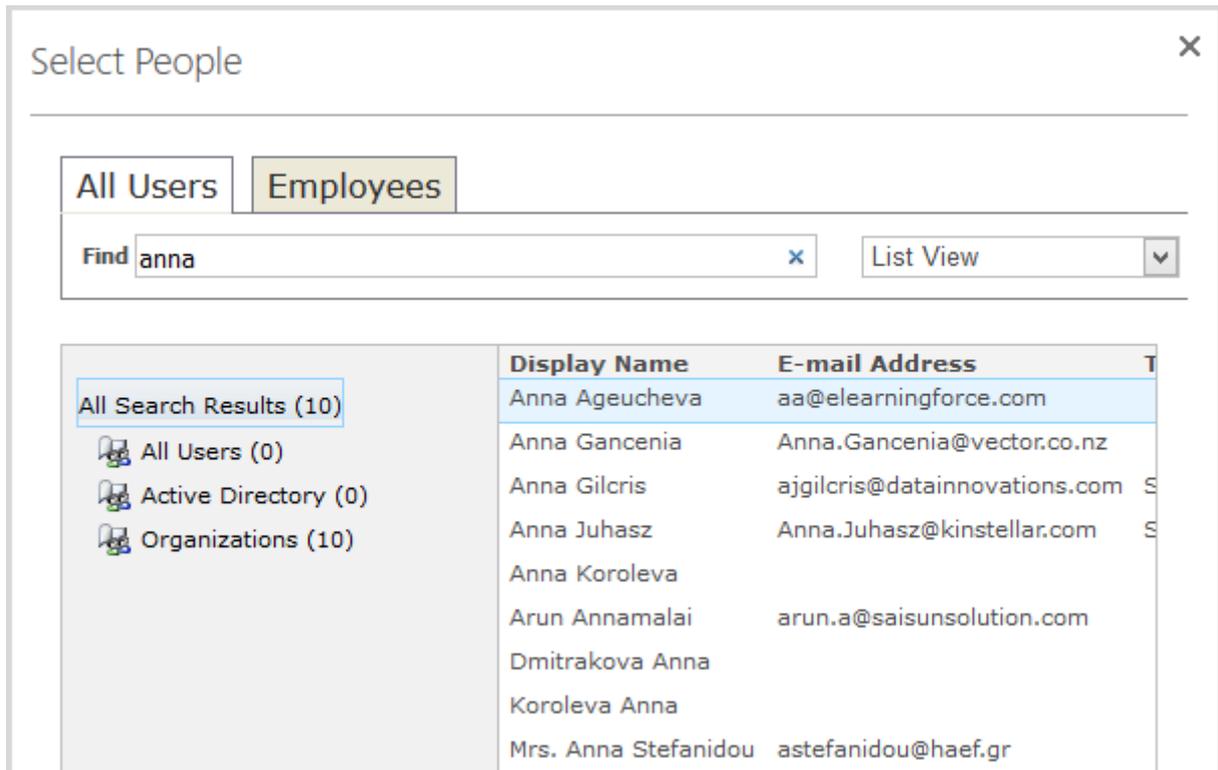

NOTE: If SharePoint is chosen – profile details are taken from user’s MySite. If there is no MySite – profile details are taken from Dashboard’s site collection. If Dashboard’s site collection has no user’s profile details – profile information will be empty. If CCM is chosen – profile details are taken from CCM host site collection. If there are no profile details – profile information will be empty.

Manager Settings include options “Show all users” and “Show tree of staff”:

“**Show all users**” option adds additional tab ‘All Users’ to people picker. When this option is enabled, it is possible to search and view not only direct subordinates but all underlying hierarchy:

“**Show tree of staff**” option switches between **Tree view** and **List view** in the ‘View My Staff’ page of the dashboard manager menu.

1.1.3 Dashboard Multilanguage Functionality

SharePoint Dashboard Multilanguage functionality allows creating websites in different languages and viewing sites in users’ preferred language. When the functionality is enabled menu and all pages are translated automatically using user’s preferred language.

NOTE: As a prerequisite for using Multilanguage Functionality, you need to activate ELEARNINGFORCE - Common: Page Redirection site feature.

User’s preferred language can be set in user’s Profile > Edit > Language and Region:

Edit Details

Default Language

The default language of the site is specified when the site is first created.

Default Language:
English

Alternate language(s)

Specify the alternate language(s) that this site will support. Users navigating to this site will be able to change the display language of the site to any one of these languages.

Alternate language(s):
 Russian

Overwrite Translations

User-specified text, such as Title and Description of the site, can be translated into the alternate language(s) supported by the site. Specify whether the changes made to user-specified text in the default language should automatically overwrite the existing translations made in all alternate languages.

Overwrite Translations:
 Yes No

OK

Cancel

When an alternate language is selected it is possible to set redirection to different pages for different languages. Users with different preferred languages will be redirected to separate pages. To do that, go to Dashboard Site Settings > Page Redirection Settings section and select redirections for Dashboard pages from the drop-down list of all pages of your Dashboard site:

Page Redirection Settings

Settings
Specify the custom redirects to specific pages

Pages:

- SitePages/Dashboard/ActionPlan.aspx
- SitePages/Dashboard/Announcements.aspx
- SitePages/Dashboard/Attendance.aspx
- SitePages/Dashboard/Certificates.aspx
- SitePages/Dashboard/Competencies.aspx
- SitePages/Dashboard/StaffCompetencies.aspx
- SitePages/Dashboard/ContinuedEducationUnit.aspx

Redirect to:
ru-RU SitePages/Dashboard/ActionPlan.aspx

OK Cancel

Page Redirection Settings section is displayed only when "ELEARNINGFORCE - Common: Page Redirection" site feature is activated.

NOTE: You can have problems with "Quick Launch" menu, as it may depend on older versions of Dashboard. To solve this issue re-activate the hidden feature "Elearningforce_Dashboard_Navigation".

1.1.4 Navigation

To manage Links on the quick launch do the following:

- Go to Settings > Site Settings;
- Click Navigation in the Look and Feel section.

You can create New Navigation Link, New Heading and Change Order of links on this page:

My Dashboard

It is possible to specify direct links to other ELEARNINGFORCE Products in the Links menu section. By default these links are disabled:

Links

- SPLMS Organization
- Competencies and Certifications
- Course Catalog

- *SPLMS Organization* – link to the first SharePoint LMS Organization associated with SharePoint REM;
- *Competencies and Certifications* – link to the Competencies and Certifications module host site;
- *Course Catalog* – link to the Course Catalog from SharePoint REM.

NOTE: To get access to Global and Current Navigation settings use direct link '[_layouts/15/AreaNavigationSettings.aspx?force=1](#)'
On this page you can the top link bar and left navigation menu settings:

1.2 REM Host Named Site Collection Creation

Host Named Site Collection is a feature of SharePoint that allows individual site collections to have their own top-level URL. To create a Host Named Site for SharePoint REM, go to REM4Configuration.xml and find the following section at the end of file:

```
<Global>
  <EnableHostNamedSites>>false</EnableHostNamedSites>
  <CustomHostNames>customer-one;customer-two</CustomHostNames>
</Global>
```

Set *<EnableHostNamedSites>* element value to true and add the configured supported hosts separated by semicolon to the *<CustomHostNames>* element. Do not include the protocol e.g. http/https.

Example:

```
<EnableHostNamedSites>>true</EnableHostNamedSites>
<CustomHostNames>starcups.sharepointlms.com;fasttrack.sharepointlms.com</CustomHostNames>
```

This configuration allows you to create the SharePoint REM host named site collection through the Central Administration UI.

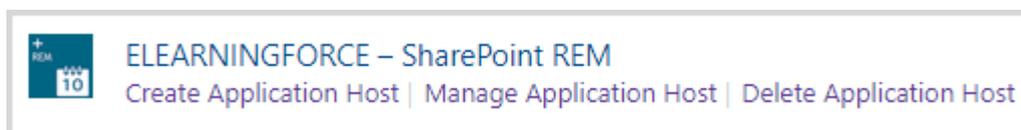

NOTE: Changes to the REM4Configuration.xml require a manual IISReset before taking effect.

1.3 Manage REM Application Host

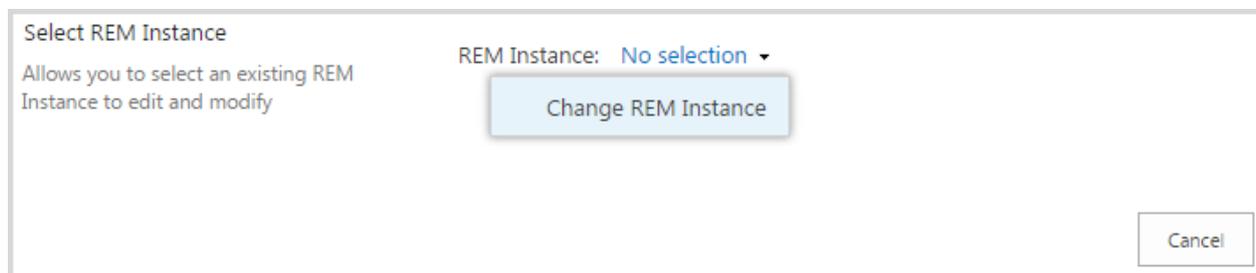

You can manage configurations of existing SharePoint Registration and Enrollment module in two ways.

1.3.1 General Steps

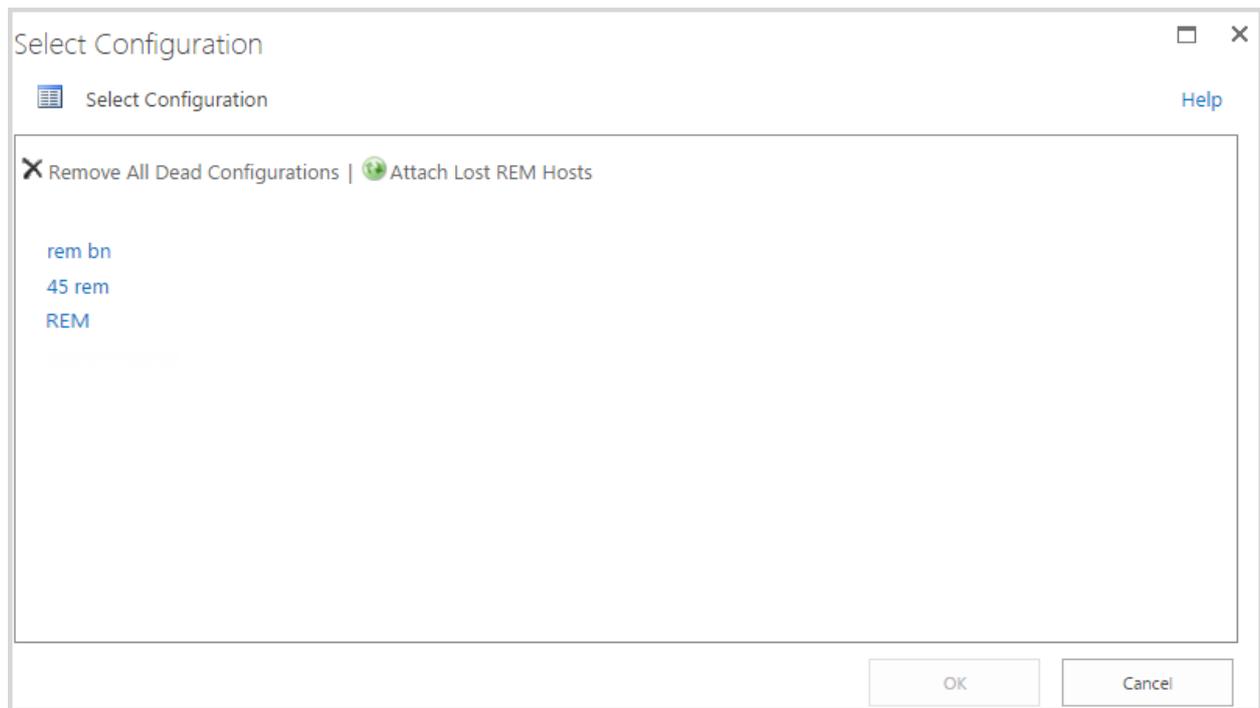

1. Go to Central Administration > Application Management > Manage Application Host:

2. In the Select REM Instance section, click Change REM Instance to select a particular module configuration:

In the open dialog box, you may see the configurations called Dead. That means that somebody deleted REM Site Collection without using the Delete REM Site Collection link. You can remove all dead configurations by clicking Remove All Dead Configurations. This button becomes visible, when dead configurations exist:

3. In the open dialog box, select a REM Instance, and then click OK. The following sections will appear: Organization, CCM Host, CCM to REM Synchronization Settings, Active Directory Source Settings, Import Config, and Reporting Center Database:

Select REM Instance

Allows you to select an existing REM Instance to edit and modify

REM Instance: REM ▾

Selected REM ID:
57247812-e970-48a7-8a8c-2007a7e3c323

Url:
</sites/remresotorefffv444333> - [Go to REM](#)

[Change site collection administrators](#)

Created In: 5.3.0.79

Updated to: 5.6.1.12

28

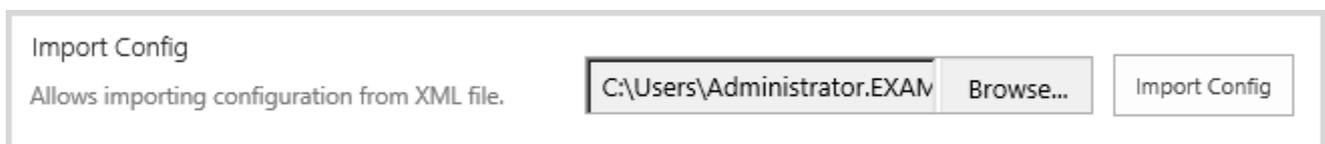

You can edit the Organization field as described [above](#).

4. Click Save to save changes of current configuration. Click OK to save changes and be redirected to the Application Management page.

1.3.2 Additional Steps

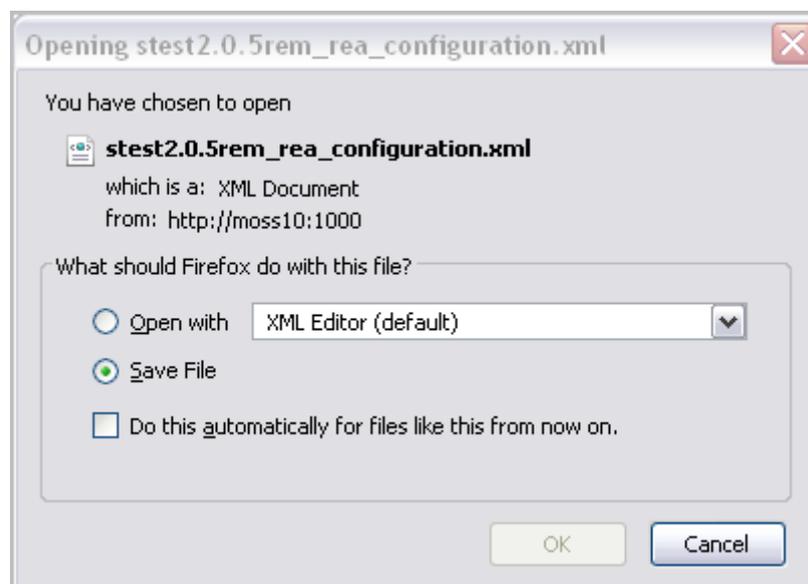

You can edit Active Directory Source Settings as described [above](#) or import the saved configuration from XML file in the Import Config section, following steps below:

1. Click Browse and select an XML file;
2. Click Import Config to import the configuration to Organization and Active Directory Source Settings sections:

3. Click Save to save changes of current configuration. Click OK to save changes and be redirected to the Application Management page.

If you want to export configuration of Organization or Active Directory Source Settings sections to XML file, click Export Config. Select Save File to save it to your local computer:

1.3.3 Setting Managed Path for Course Creation

It is possible to configure URL prefix for creation of new courses, so that all new courses will be created using the specified managed path. To set it go to Central Administration > Application

Management > SharePoint LMS > Global Features > Managed Path for Course Creation and enable the option selecting 'Yes' radio button. Then select from the dropdown lists prefixes to be assigned to all newly created courses:

Managed Path For Course Creation

Select the location at which to create courses. This should be a wildcard inclusion managed path defined on the web application. If option is not enabled user can choose any managed path on the course creation page.

Existing courses will not be affected.

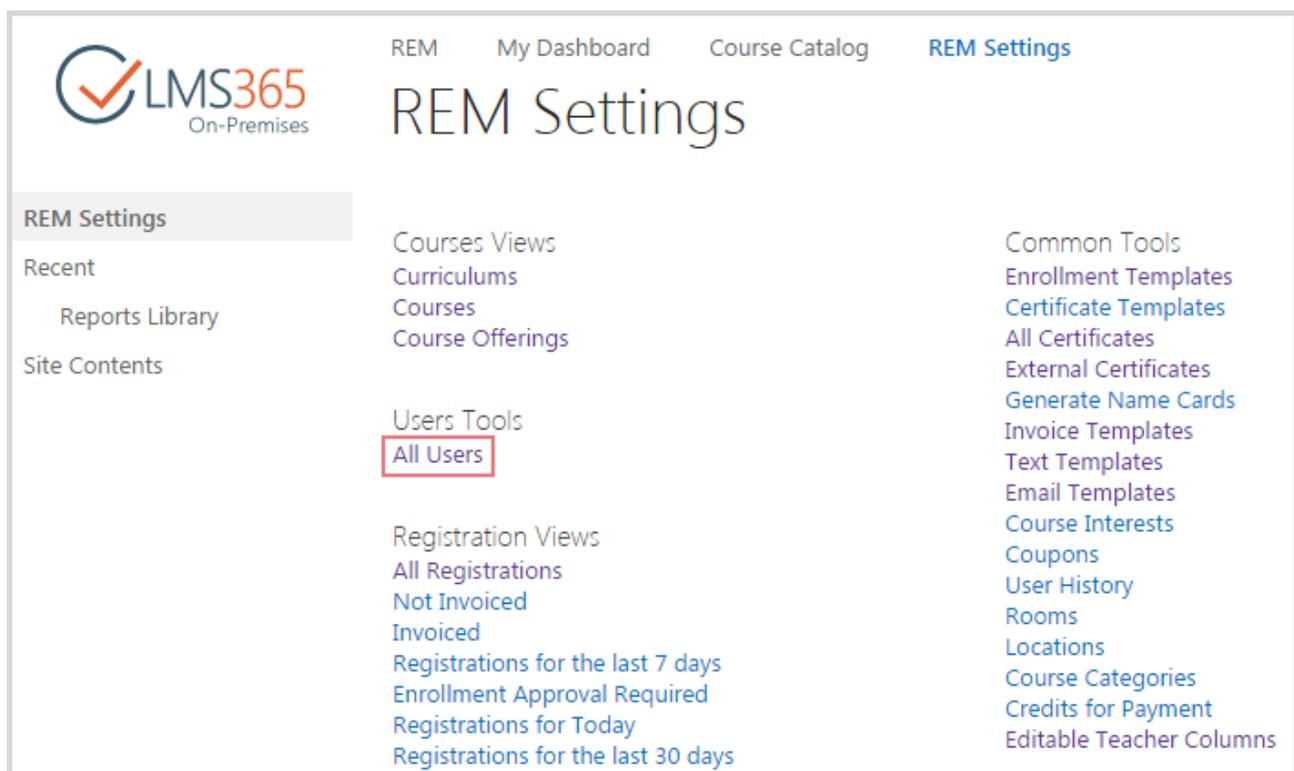

Specify URL prefix?
 Yes No

http://sp2013-iwa

For host-named courses:
 http://<host header>

1.4 User Tools Management

The Users Tools action allows viewing user details, adding new users, enrolling users in courses and deleting them:

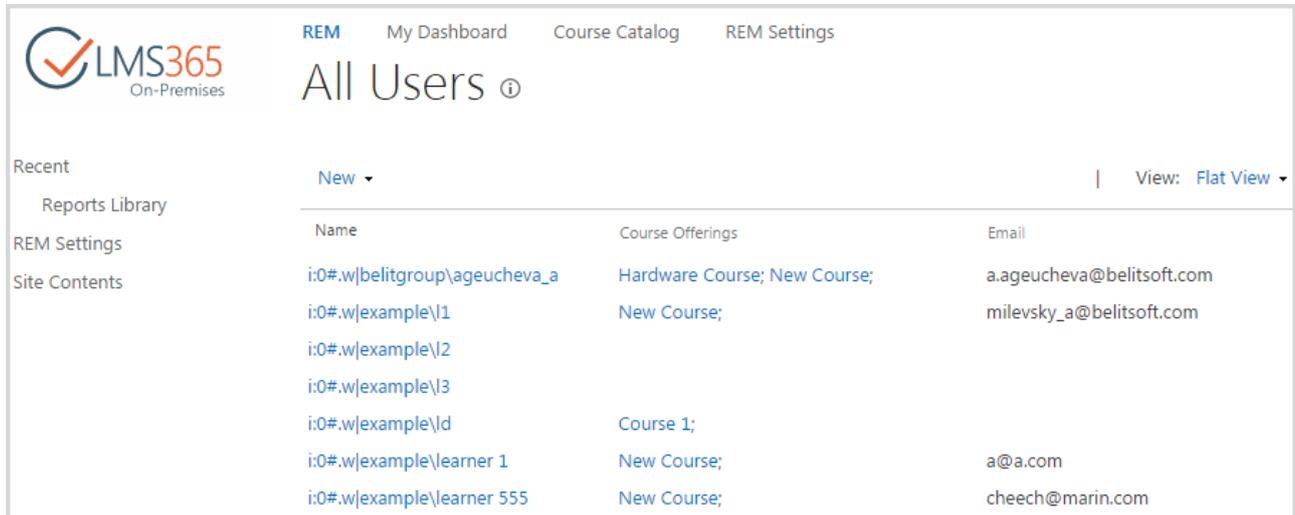

The screenshot shows the LMS365 On-Premises interface. At the top, there are navigation links: REM, My Dashboard, Course Catalog, and REM Settings. The main heading is 'REM Settings'. On the left, there is a sidebar with 'REM Settings' selected, and other options like 'Recent', 'Reports Library', and 'Site Contents'. The main content area is divided into three columns. The middle column contains 'Courses Views' (Curriculum, Courses, Course Offerings), 'Users Tools' (with 'All Users' highlighted in a red box), and 'Registration Views' (All Registrations, Not Invoiced, Invoiced, Registrations for the last 7 days, Enrollment Approval Required, Registrations for Today, Registrations for the last 30 days). The right column contains 'Common Tools' (Enrollment Templates, Certificate Templates, All Certificates, External Certificates, Generate Name Cards, Invoice Templates, Text Templates, Email Templates, Course Interests, Coupons, User History, Rooms, Locations, Course Categories, Credits for Payment, Editable Teacher Columns).

NOTE: SharePoint REM Users can be managed from the All Users section. Especially it applies to deleting users. For example, after a SharePoint REM user is deleted from a site collection by standard SharePoint scenario (*Settings > Site Settings > Users & Permissions: People & Groups*), all registration items remain. This leads to the following:

- If you try to delete the registration items of deleted users, these users will not be deleted from the Learners group of LMS Course automatically;

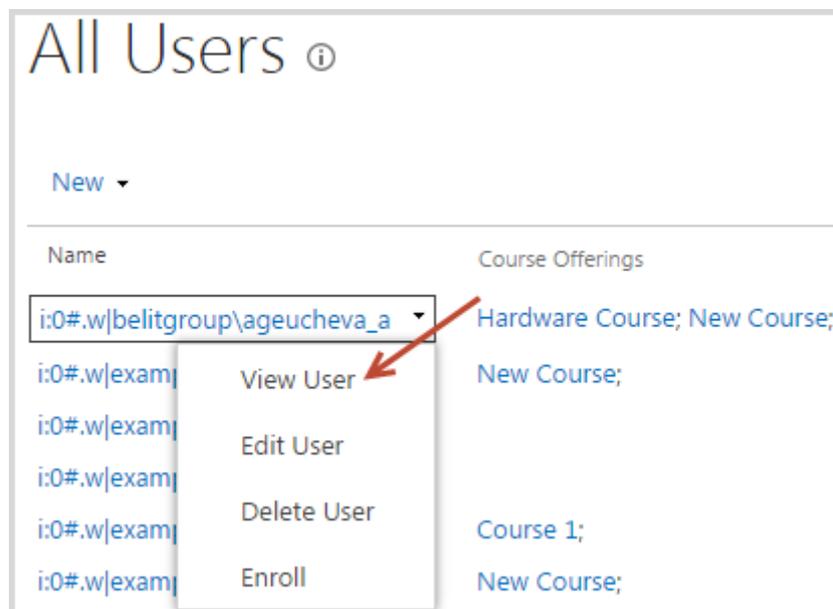

– All processes with registration items of deleted users may perform incorrectly.

1. Choose All Users link from on the REM Settings page to open the list of current site collection users which have Learners roles:

Name	Course Offerings	Email
i:0#.w belitgroup\ageucheva_a	Hardware Course; New Course;	a.ageucheva@belitsoft.com
i:0#.w example\1	New Course;	milevsky_a@belitsoft.com
i:0#.w example\2		
i:0#.w example\3		
i:0#.w example\d	Course 1;	
i:0#.w example\learner 1	New Course;	a@a.com
i:0#.w example\learner 555	New Course;	cheech@marin.com

2. To view the user details click the drop-down arrow next to the needed user name and select View User:

Name	Course Offerings
i:0#.w belitgroup\ageucheva_a	Hardware Course; New Course;
i:0#.w exam	New Course;
i:0#.w exam	
i:0#.w exam	Course 1;
i:0#.w exam	New Course;

3. The following window will open:

4. Use the Edit Item and Delete User from Site Collection buttons to perform the corresponding actions.

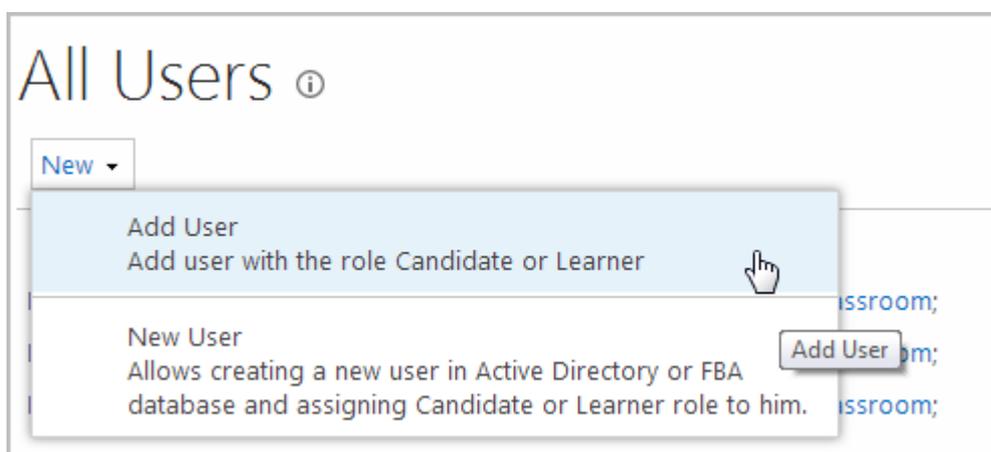

1.4.1 Adding Users

It is possible to add to SharePoint REM users that already exist in AD and add new users.

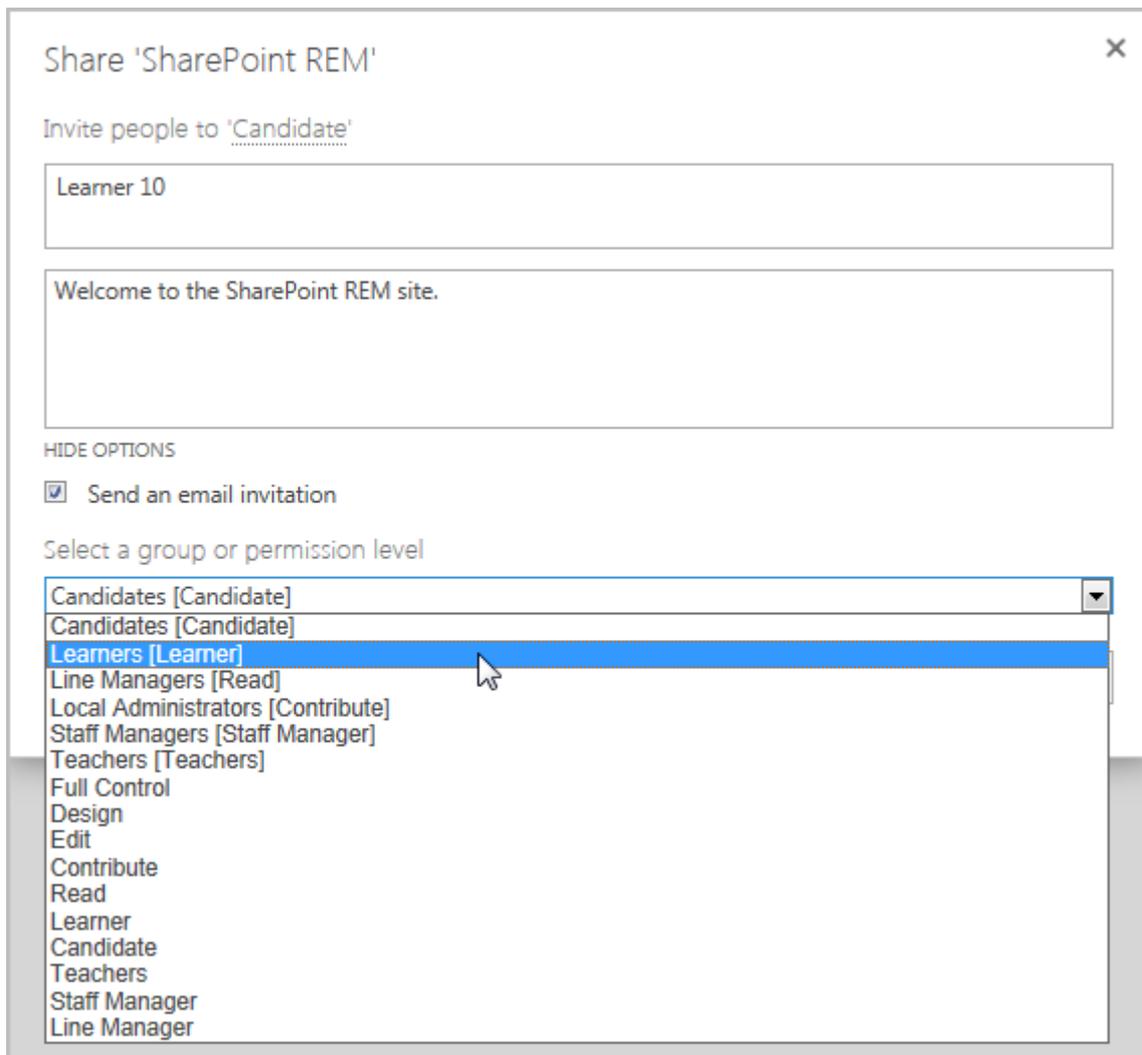

1.4.1.1 Adding Existing Users

To add a user who already activated in AD, do the following:

1. Go to the All Users section;
2. Click New > Add User:

3. Complete the open form:
 - *Invite people* – select the users or groups that you want to add to the site;
 - *Send an email invitation* – allows sending welcoming email to the newly added users. When selected, field for email is activated;
 - *Select a group or permission level* – select a SharePoint group to add user or grant users permission directly.

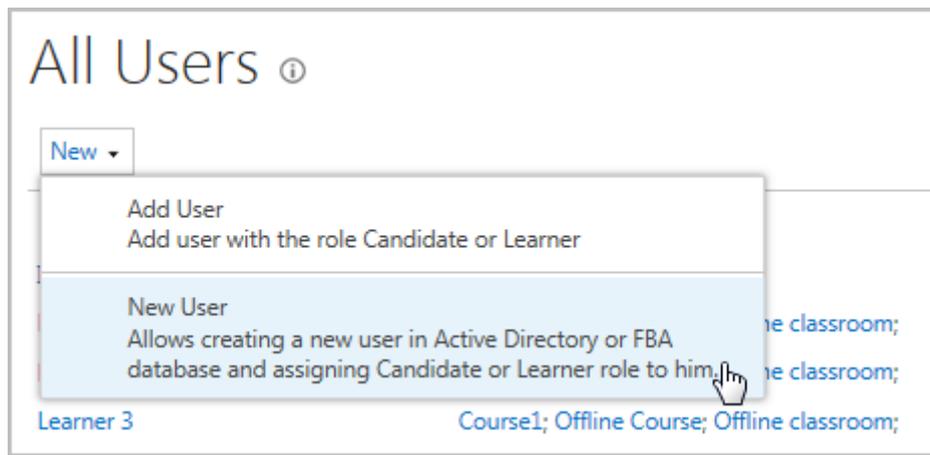

4. Click Share to add the user(s) to the All Users list.

1.4.1.2 Adding New Users

NOTE: This option is only possible if during the site collection creation you cleared the 'Don't use users registration part' check box (for details, see chapter *SharePoint REM Site Collection Creation* in "*SharePoint REM Installation Guide*"). If the check box was selected, you can only add the existing users.

To create a new user and then add him to SharePoint REM, do the following:

1. Go to the All Users section;
2. Click New > New User:

3. Complete the open form (the fields marked with asterisk (*) are required). Values of all fields are the same as in AD:

New User ✕

User Name
Type a unique logon user name.
Type the first and the last name.

User logon name *

First Name *

Last Name *

Password
Set the User Password. The Password must meet the Password policy requirements.

Password *

Confirm Password *

Organization
Type the User Organization, Department and Job Title.

Job title

Department

Organization

Contact
Specify information to contact the user.

Email *

Phone

Fax

Address
Section contains user address fields.

Street

City

State/Province

Country

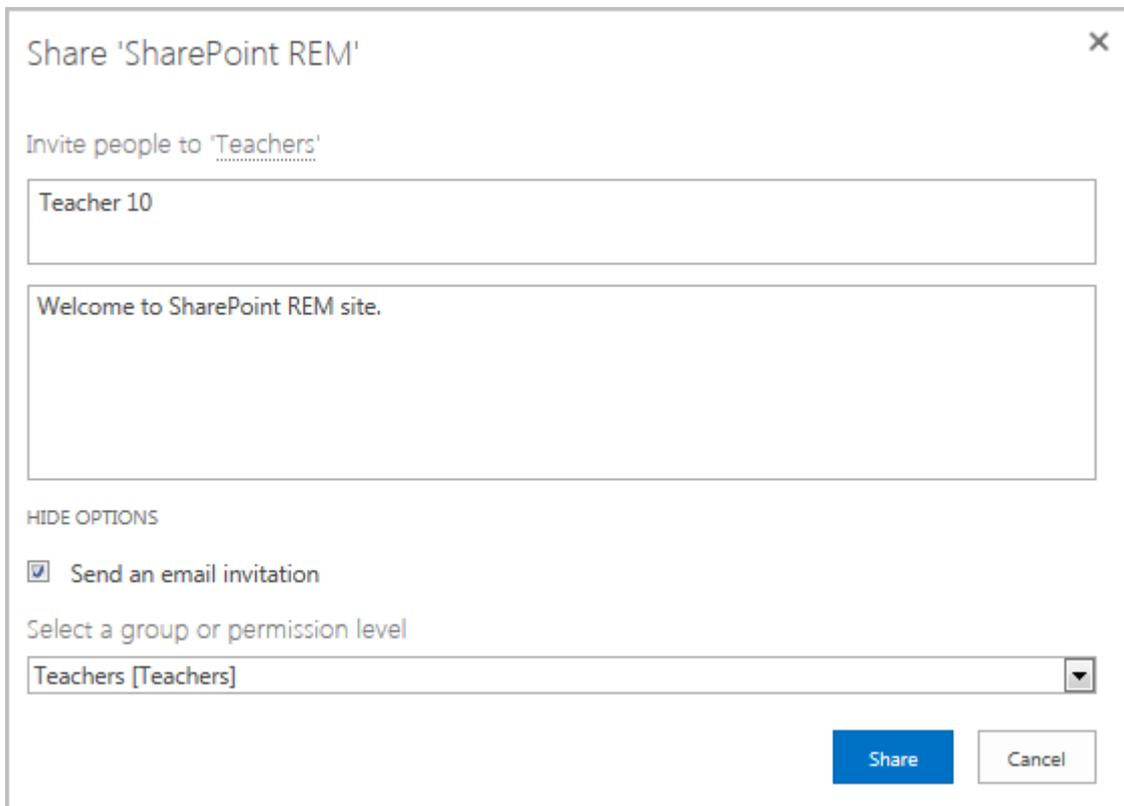

Zip/Postal code

Add user to the site after creation
If the option is selected the user will see standard Add User page.

Add user to the site after creation

4. To add a newly created user to the site, select the Add user to the site after creation check box. If the box is unchecked, the user will only be added to AD, not to SharePoint REM and you will need to add him later as an existing user;

5. Click OK. If you have selected the Add user to the site after creation check box, continue with the steps below. If cleared – the user will be added to AD and the form will close;
6. Complete the open form:

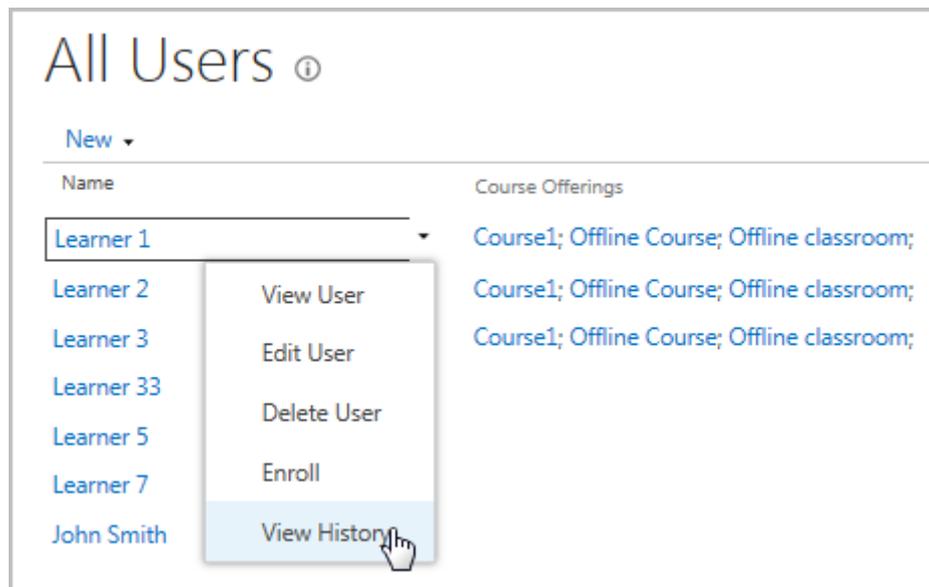

- *Invite people* – select the users or groups that you want to add to the site;
- *Send an email invitation* – allows sending welcoming email to the newly added users. When selected, field for email is activated;
- *Select a group or permission level* – select a SharePoint group to add user or grant users permission directly.

7. Click Share to add the user to the All Users list.

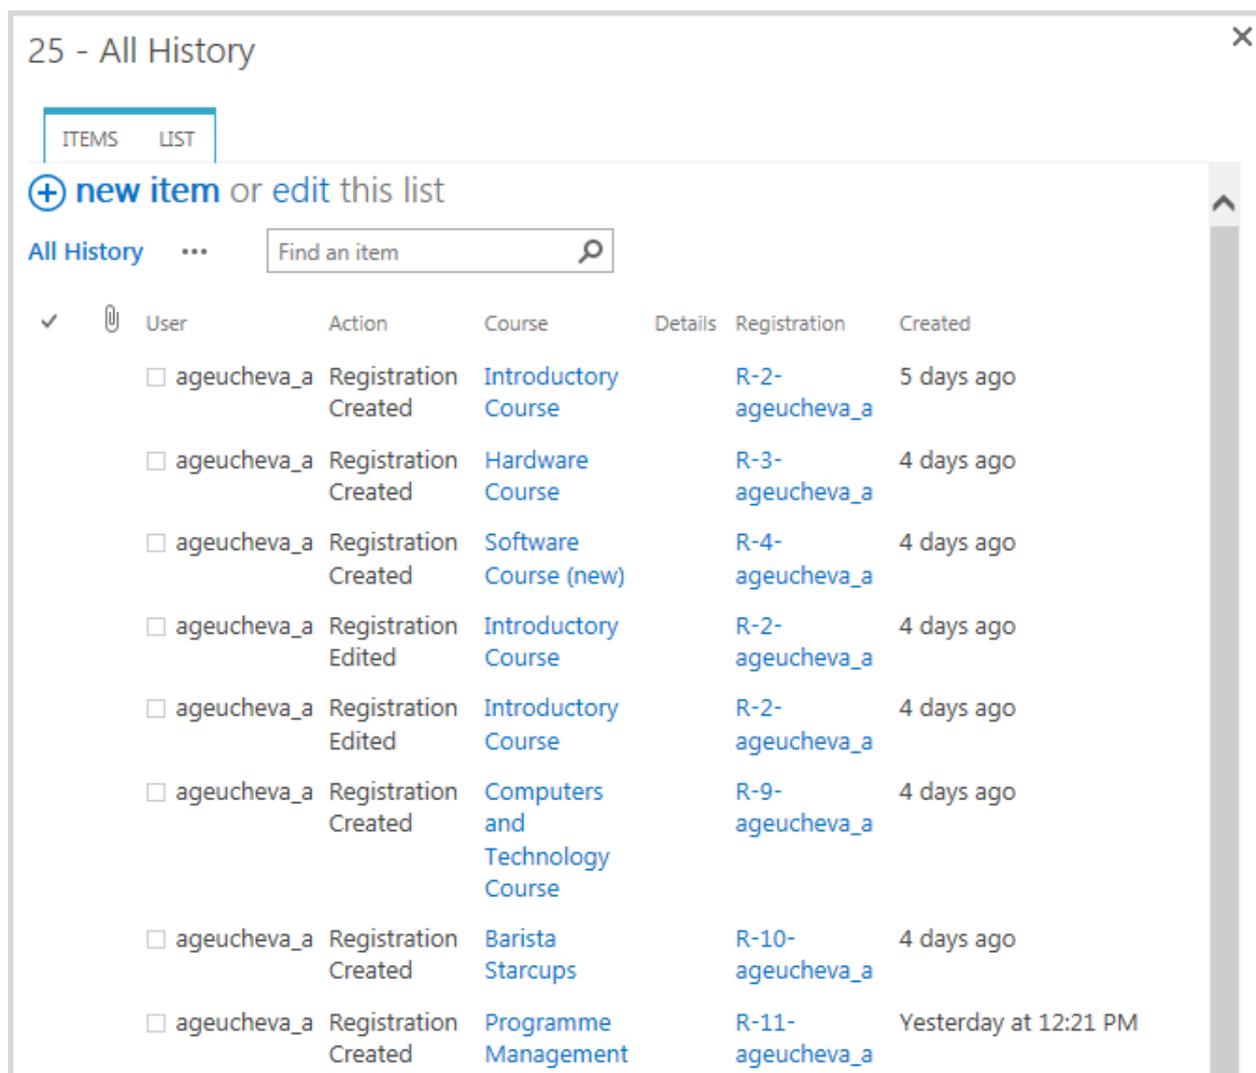

1.4.2 Viewing User Courses History

To view user's courses history, do the following:

1. Go to the All Users section;
2. Click the drop-down arrow next to the needed user and select View History:

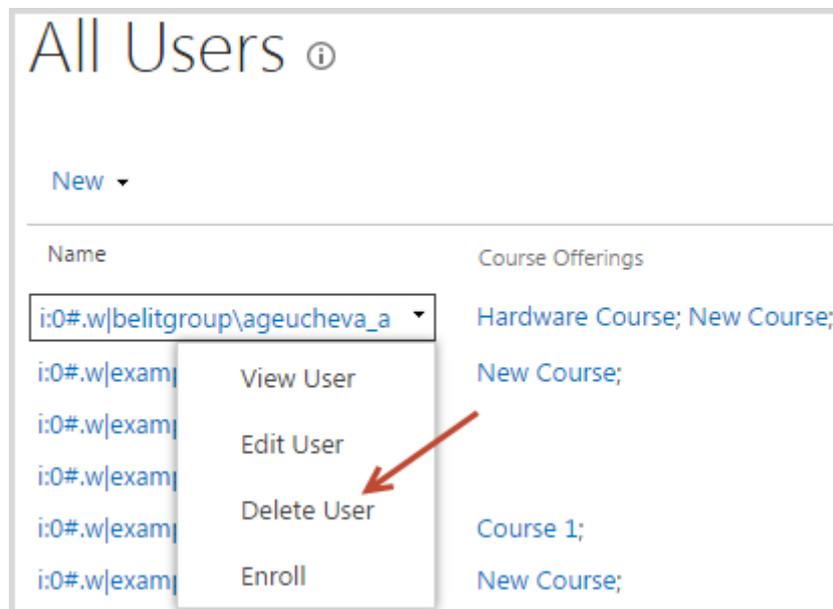

- The page will open containing a list of user's registrations and their versions (every time you make any change, a new registration version is created). The Registration field contains links to the pages where the current registration version is compared to the previous one:

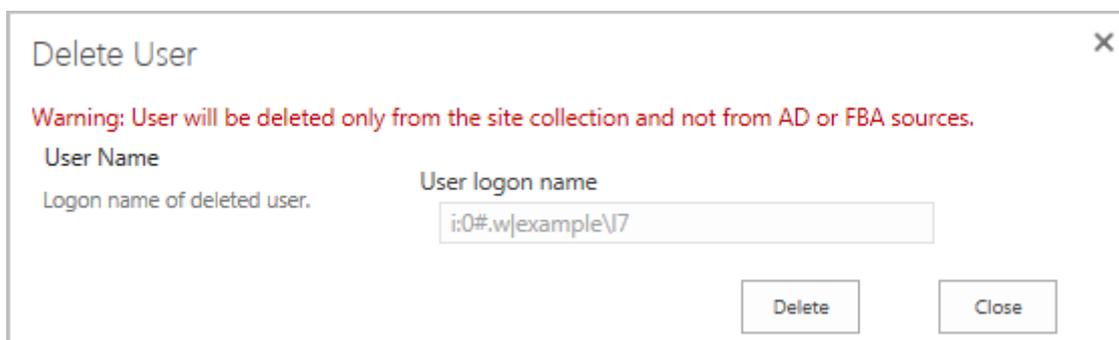

1.4.3 Deleting Users

To delete a user from the All Users list, do the following:

1. Click drop-down arrow next to the user you want to delete and select Delete User:

- a) If the user was added to the site from AD or FBA (for details, see chapter 18.1.1 [Adding Existing Users](#) for details), the following dialog box will appear:

- b) If the user was created in SharePoint REM (see chapter 1.4.1.2 [Adding New Users](#) for details), the following dialog box appears, and you can select either you want to delete the user from AD and FBA or from SharePoint REM only:

Delete User ✕

User Name
Logon name of deleted user.

User logon name

 Don't delete account directly from AD or FBA - just disable it

2. Click Delete to confirm the deletion. You will be redirected to the All Users section.

NOTE: SharePoint REM Users can be managed from the All Users section. Especially it applies to deleting users. For example, after a SharePoint REM user is deleted from a site collection by standard SharePoint scenario (*Settings > Site Settings > Users & Permissions: People & Groups*), all registration items remain. This leads to the following:

- If you try to delete the registration items of deleted users, these users will not be deleted from the Learners group of LMS Course automatically;
- All processes with registration items of deleted users may perform incorrectly.

1.4.4 Changing List View

The learners list has two viewing options: Flat View and Grouped by Course. The default is Flat View:

[REM](#) | [My Dashboard](#) | [Course Catalog](#) | [REM Settings](#)

All Users ⓘ

Recent
New ▾
View: Flat View ▾

	Name	Course Offerings	Email
Reports Library	i:0#.w belitgroup\ageucheva_a	Hardware Course; New Course;	a.ageucheva@belitsoft.com

i:0#.w examj	
i:0#.w examj	Course 1;
i:0#.w examj	New Course;

View User

Edit User

Delete User

Enroll

3. In the open dialog box, select ONE course for enrollment:

Enroll User ✕

Select Course Offering
Picker allows you to choose a course offering for enrollment.

Course Offering:
Offline classroom  

NOTE: You can select only a course that has an applied Enrollment Template with active status, and a user should not have an active registration to this course.

- Click Enroll. You will be redirected to the enrollment template of the selected course similar to the mentioned [above](#). Complete the form and click OK.

NOTE: It is possible to have 2 registrations for the same user for the same course offering:

Registrations ⓘ

[All Registrations](#)
Coupon
Enrollment Approval Required
⋮

	Title	User	Status	Is Invoiced
▾	Course : Barista Starcups (1)			
▾	Course : Computers and Technology Course (2)			
▾	Course : Hardware Course (2)			
▴	Course : Introductory Course (3)			
	R-2-ageucheva_a	⋮ <input type="checkbox"/> ageucheva_a	Canceled	No
	R-15-Learner 10. ✳	⋮ <input type="checkbox"/> Learner 10.	Canceled	No
	R-16-Learner 10. ✳	⋮ <input type="checkbox"/> Learner 10.	Enrolled	No

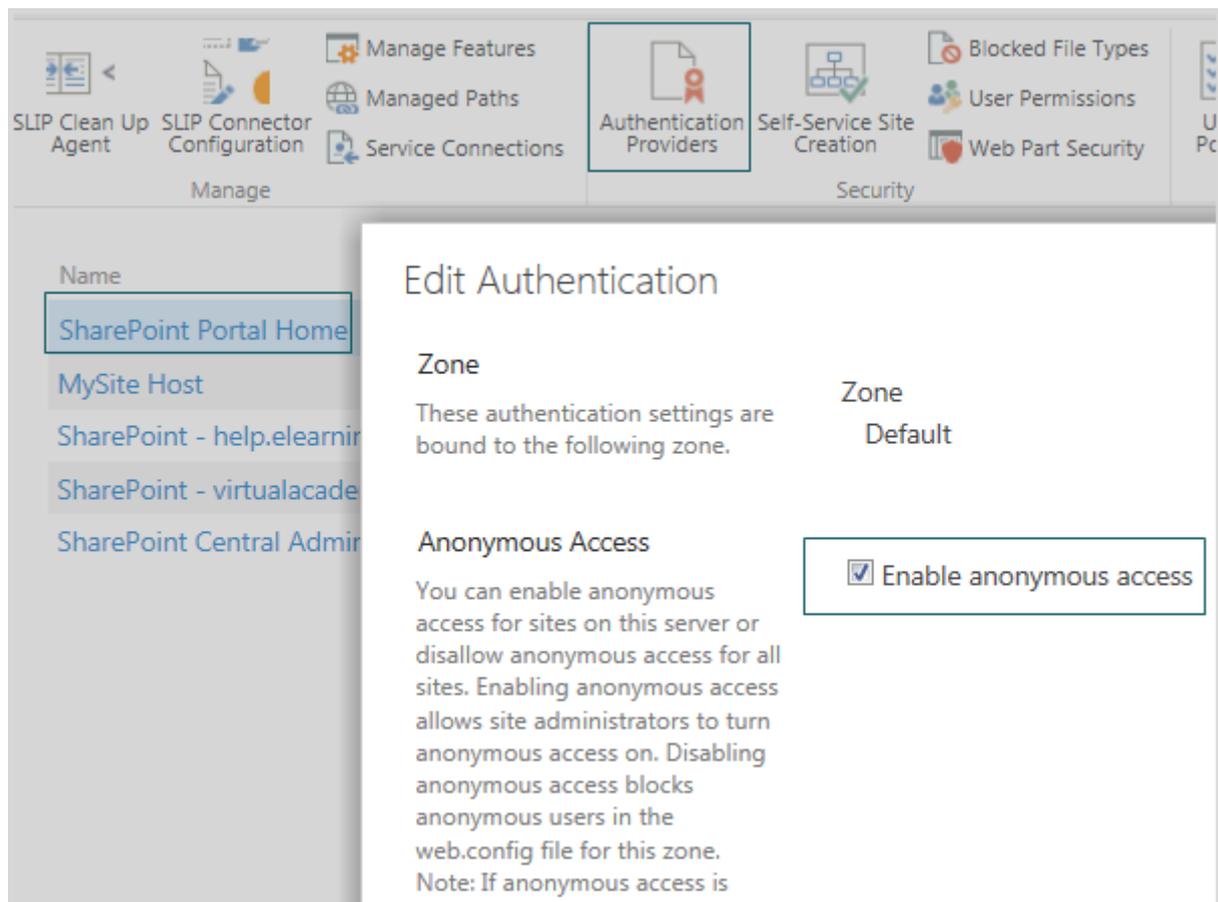

Enrolling user to the course again is possible if his/her previous registration has status: *Course Completed*, *Course Not Completed*, *Canceled*. The new registration has new registration key if the user was enrolled from Course Offerings or All users page, or via Group Enrollment Flow feature. If the 'Add Registrations with Existing Key' button was used to enroll user to the same course offering, the new registration has the same registration key.

1.5 Anonymous access

In case you plan to have a public facing course catalog then a new user should have an access to the Welcome page to be able to register and enroll in courses. To grant such permissions to any anonymous user perform the steps described below to enable anonymous access on REM site.

In case you plan to use course catalog for authenticated users only make sure you have 'Everyone' added to Visitors SharePoint group of the site collection.

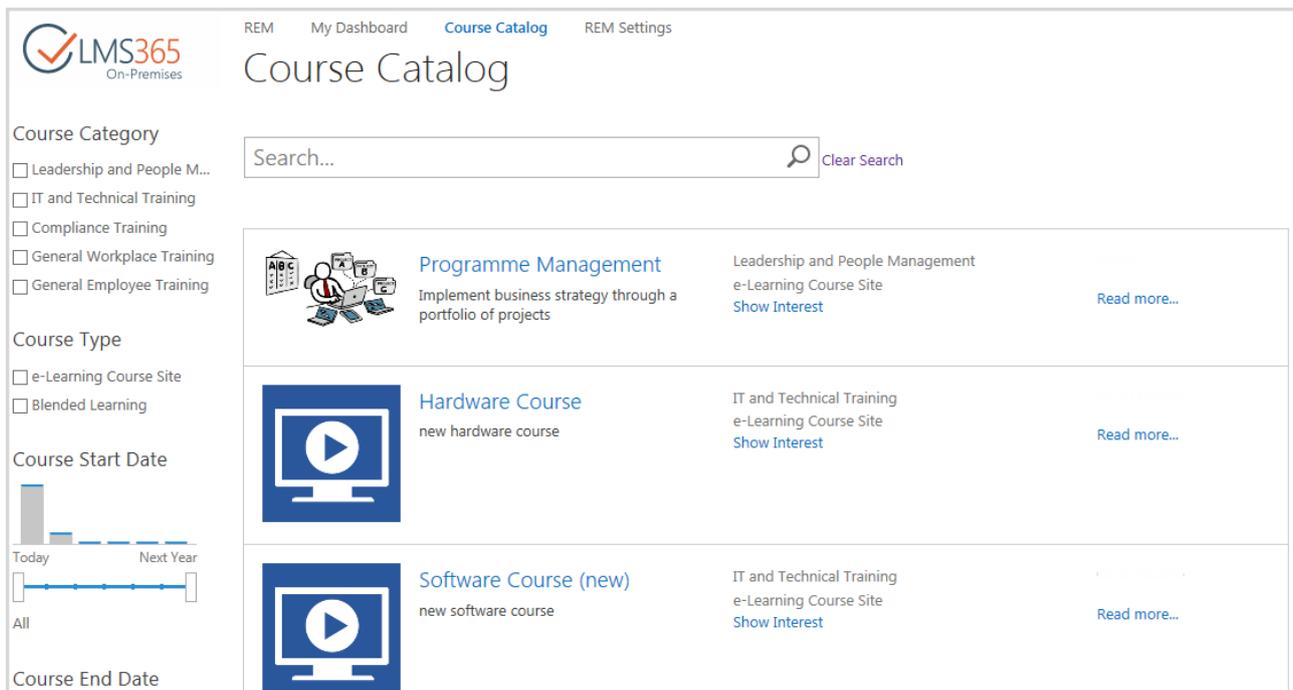

1. Go to Central Administration > Web Applications Management > SharePoint 80 > Authentication Providers > Edit authentication;
2. Select the Enable anonymous access check box:

3. Click Save to apply changes.

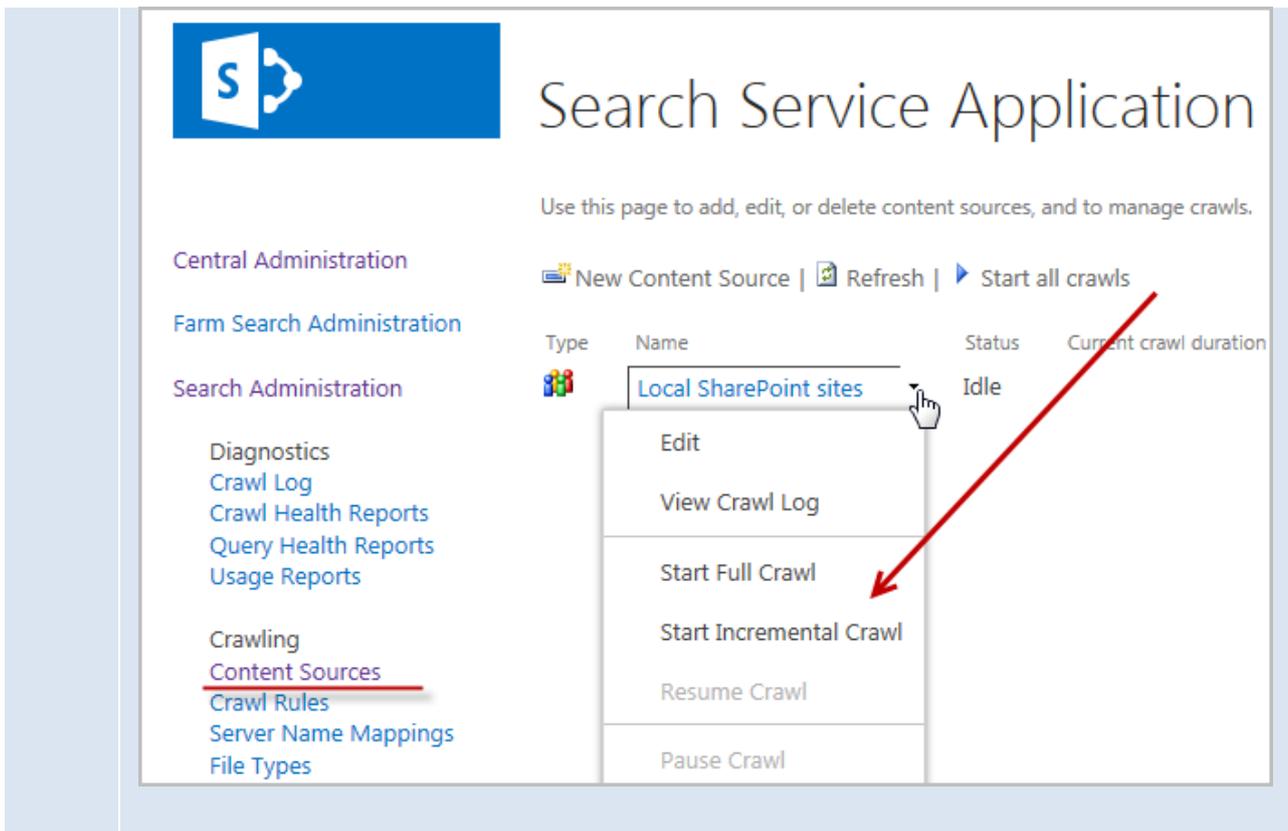

1.6 Course Catalog Search

Course catalog search is based on native SharePoint Search and Managed Metadata services, and is provided by the following features:

- 'ELEARNINGFORCE – REM: Courses Search Configuration' web application scoped feature. The system attempts to activate the feature automatically during installation of the solution.

NOTE: Text search in Course Catalog is possible for indexed content only. To index all content of the Course Catalog, you should start crawl process: for the first time after feature activation start Full Crawl, after making some changes (e.g. creating new Courses, Course Offerings) – Incremental Crawl. To do it, go to *Central Administration* > *Application Management* > *Manage service applications* > *Search service application*, select *Content Sources* in the left menu and select to start Full or Incremental Crawl for Local SharePoint sites:

When the feature is activated the term store group 'ELEARNINGFORCE REM4' is created in the managed metadata service connected to web application. The term store group contains default term sets Course Categories, Course Types, Locations & Rooms with samples.

- ELEARNINGFORCE – REM: Courses Search site collection scoped feature (ELEARNINGFORCE – REM: Courses Search Configuration web application feature is its prerequisite). The system attempts to activate the feature automatically during creation of REM host site collection. After feature is activated the following content is installed within the REM site collection:
 - REMCourses v2 result source (site collection scope):

The result source is used by full text search and defines the search rules that allow search within the published active courses that allow direct enrollment with active course offerings. After feature activation Full Crawl need to be run to index the content of the REM sites;
 - CourseCatalogSearch.aspx page with the following web parts:
 - Search Box Web part is OOTB SharePoint web part that allows inputting text query and redirects users to the search result page. Edit this web-part to configure properties for search box: search settings, query suggestions and settings:

Properties for Search Box

[Which search results page should queries be sent to?](#) [Help](#)

Use this site's [Search Settings](#)

Send queries to other Web Parts on this page.

[Courses Search Results - Default](#)

Send queries to a custom results page URL.

Results page URL:

~site/_layouts/15/osssearchr

Turn on the drop-down Search Navigation menu inside the search box, and use the first navigation node as the destination results page.

[Query Suggestions](#) [Help](#)

[Settings](#) [Help](#)

- Course Search Result Adapter Web part is a web part that transforms full text query from Search box to the query compatible with Courses List web part. Course Result Adapter web part allows configuring result sources, display templates, result type rules, query rules and setting display of ranked result and promoted result in the search results field:

Courses Search Results

[Look in the right place](#)
Define [result sources](#) that change where results come from.

[Tailor the look of important result types](#)
Craft a [display template](#) in HTML and a [result type rule](#) that controls when to show it.

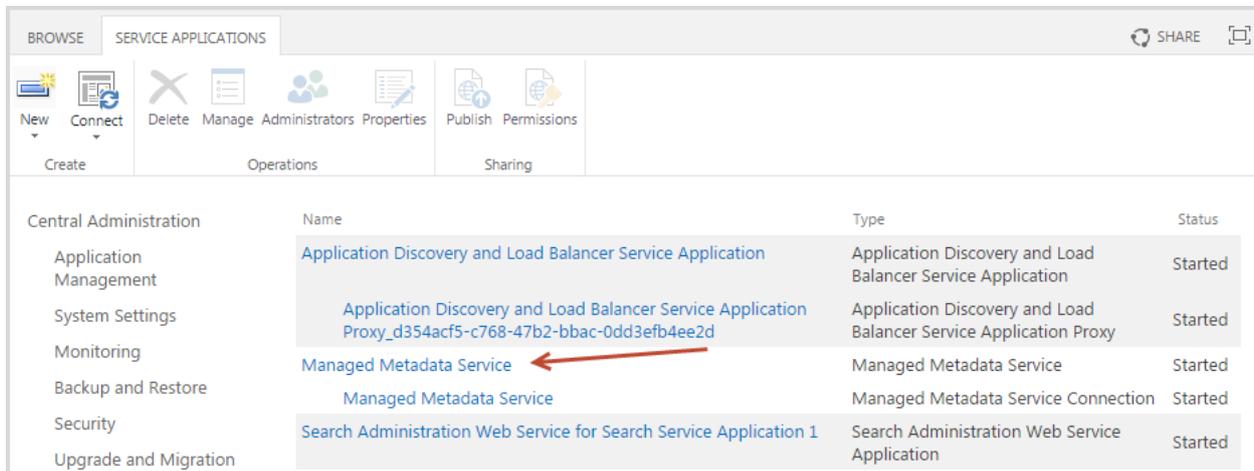

[Get even more relevant results](#)
Create [query rules](#) to promote important results, show blocks of alternate items, and fine-tune ranking.
[Learn more](#) about how to customize search results.

[Ranked Results](#)
Results and blocks chosen by the search engine. Tune these using [query rules](#).

1.6.1 Add new category to ELEARNINGFORCE REM4 term store

To add a new Course Category, do the following:

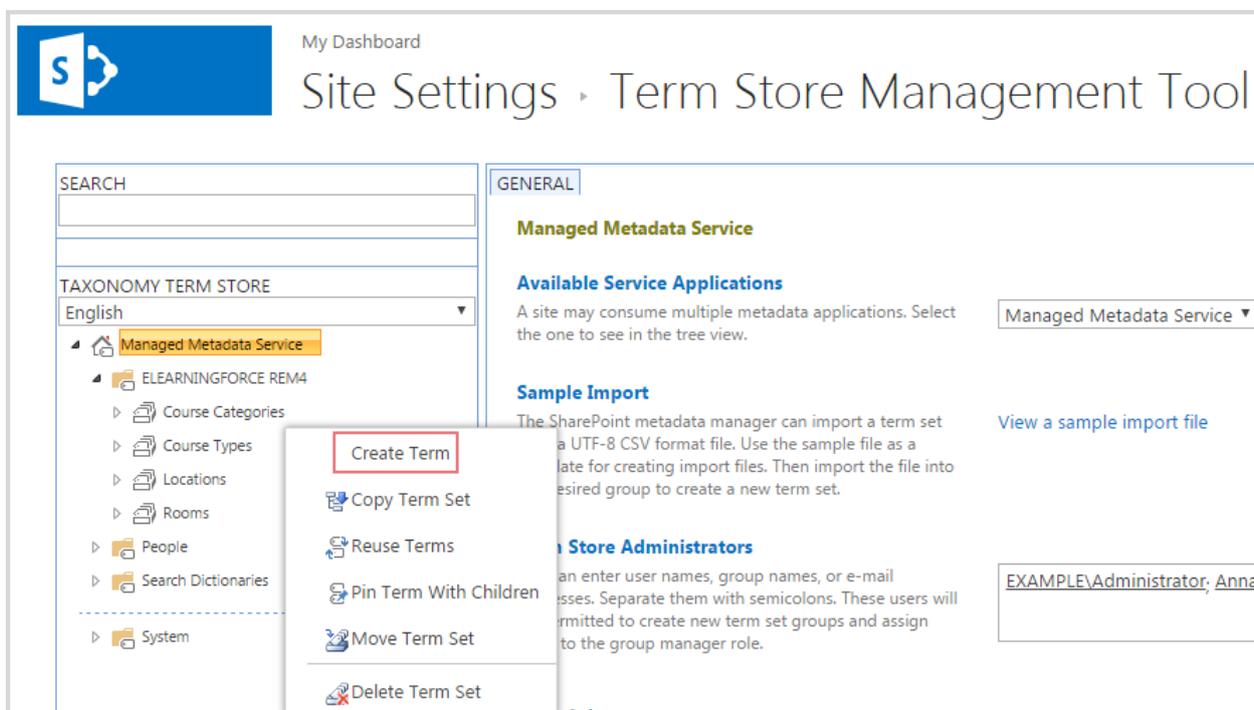

1. Go to Central Administration > Application Management > Service Applications > Manage Service Applications and select Managed Metadata Service:

The screenshot shows the 'SERVICE APPLICATIONS' management page. A red arrow points to the 'Managed Metadata Service' entry in the table below.

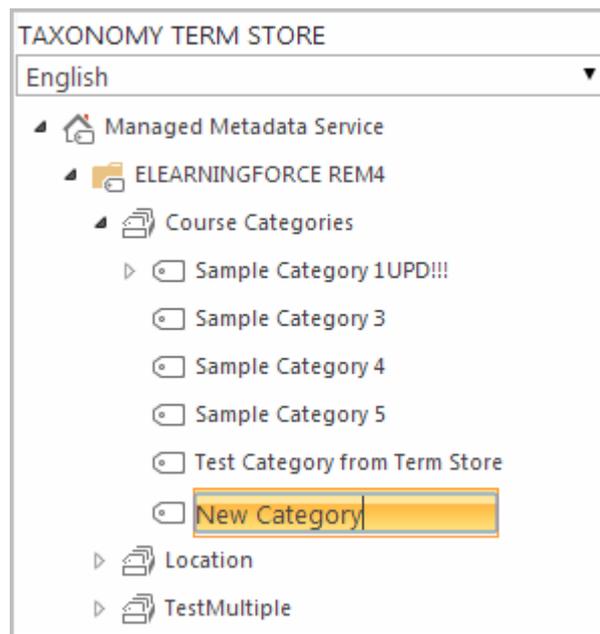

Central Administration	Name	Type	Status
Application Management	Application Discovery and Load Balancer Service Application	Application Discovery and Load Balancer Service Application	Started
System Settings	Application Discovery and Load Balancer Service Application Proxy_d354acf5-c768-47b2-bbac-0dd3efb4ee2d	Application Discovery and Load Balancer Service Application Proxy	Started
Monitoring	Managed Metadata Service	Managed Metadata Service	Started
Backup and Restore	Managed Metadata Service	Managed Metadata Service Connection	Started
Security	Search Administration Web Service for Search Service Application 1	Search Administration Web Service Application	Started
Upgrade and Migration			

2. In the opened Term Store Management Tool select Managed Metadata Service > ELEARNINGFORCE REM4 > Course Categories > Create Term:

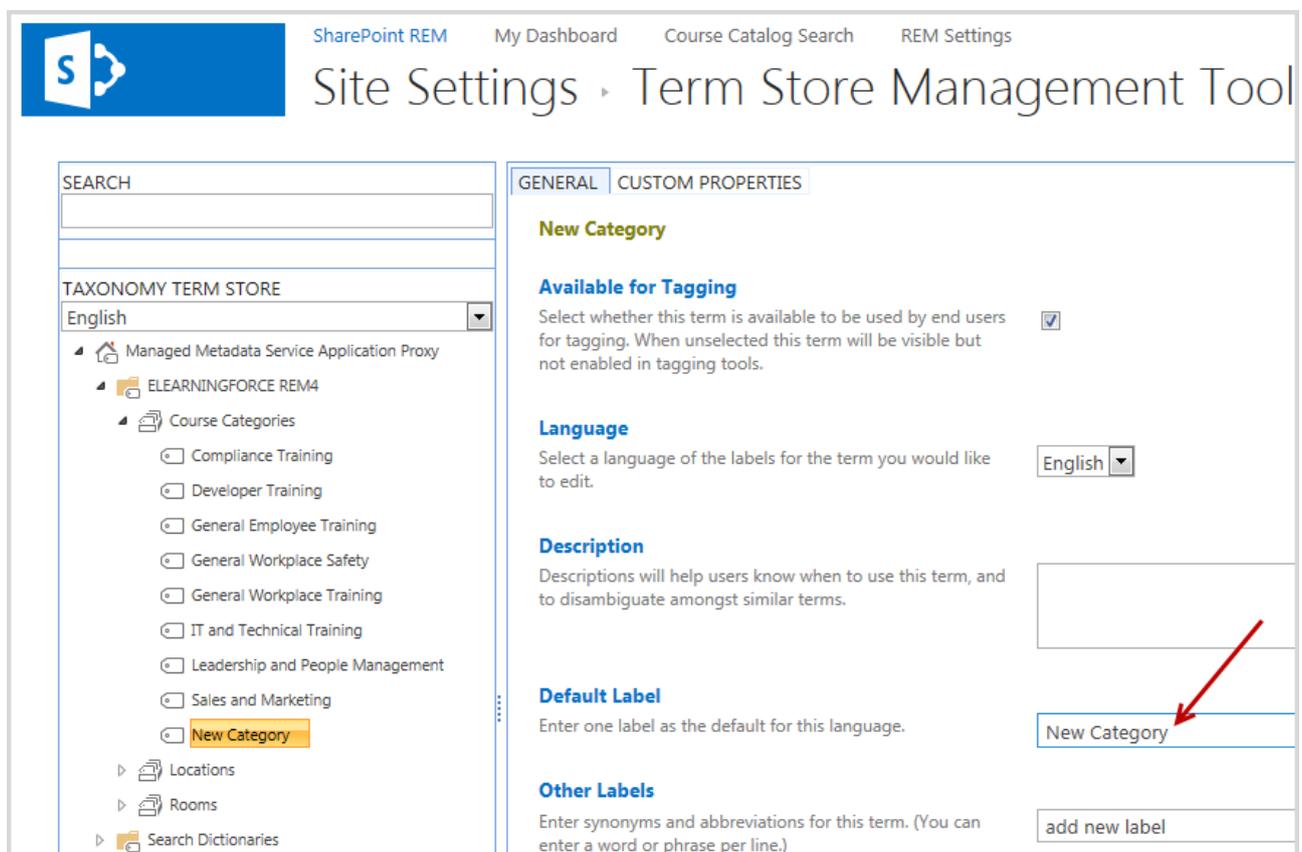

The screenshot shows the 'Term Store Management Tool' interface. The 'TAXONOMY TERM STORE' is set to 'English'. The tree view shows 'Managed Metadata Service' > 'ELEARNINGFORCE REM4' > 'Course Categories'. A context menu is open over 'Course Categories', with 'Create Term' highlighted in a red box. The 'GENERAL' tab is active, showing 'Managed Metadata Service' as the selected application.

3. Enter Title for the new category:

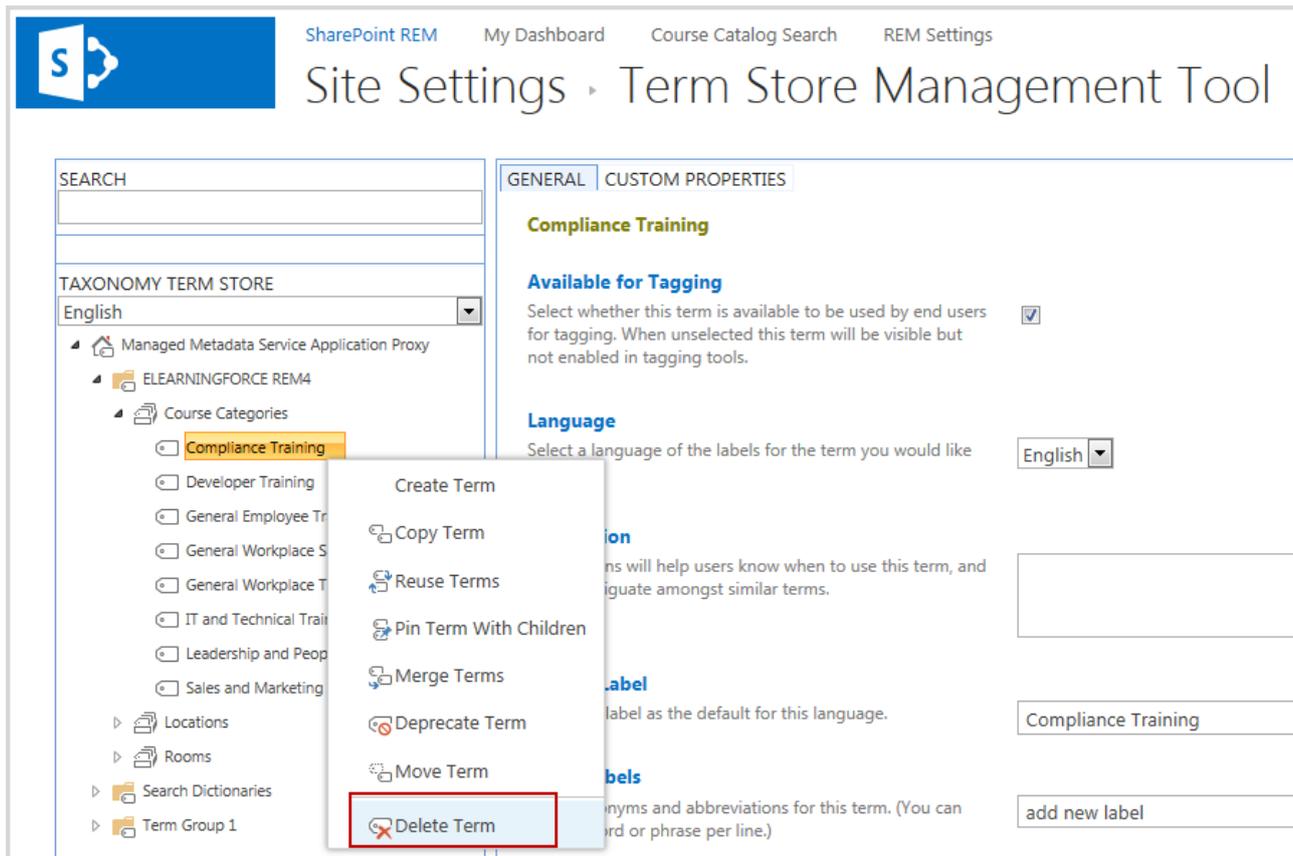

The new category will be available in all REM sites within the farm.

To edit an existing category, double-click on its name or select a category and edit the Default Label:

To delete a category, select a category and click Delete Term in the drop-down menu:

- NOTE:** The terms' default labels are created in English and it is up to customer to create labels on other languages.
- NOTE:** After the REM Courses Search feature is activated, *Categories* section does not function: old categories are displayed for courses created earlier in the Category field, but cannot be assigned to new courses and are not available in the *Category Refinement Panel* in *Course Catalog Search*. In order to use categories created before the feature activation, create the same categories again using the Term Store Management Tool.

1.7 REM Publishing feature

This feature provides a set of pages stored in the Pages library. These pages provide enrollment flow for the end user, home page and navigation concept. The feature's functionality is based on OOTB SharePoint Server publishing capabilities such as dynamic page layouts, navigation, and target audience. The system attempts to activate this feature automatically during creation of REM host site collection.

REM Publishing is a site collection scope feature that activates several hidden features. The required activation dependencies are activated automatically:

- SharePoint Publishing Server Infrastructure;
- SharePoint Publishing Server;
- REM Courses Search.

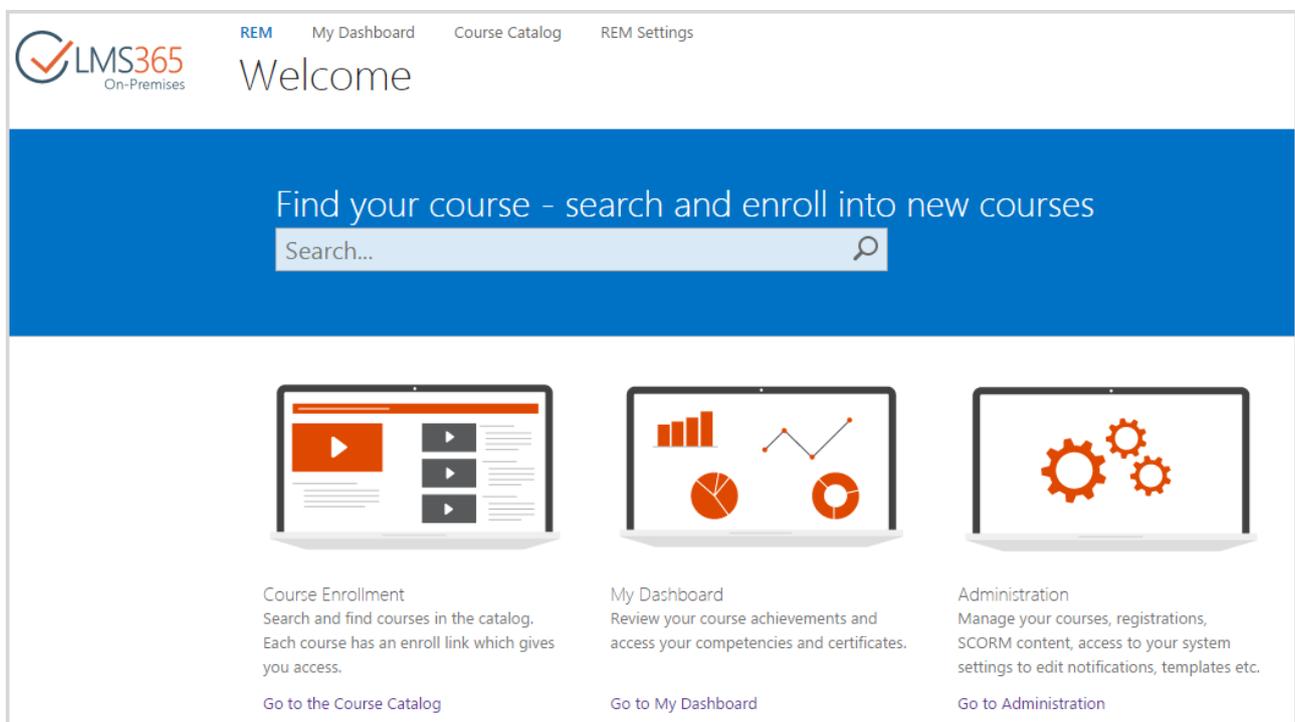

Hidden features that are activated with the feature REM Publishing:

1. Text Template Updater – see description [below](#). The feature is hidden and not visible through the UI;
2. REM Publishing Pages – this is site scoped feature that provides content described below. The feature is hidden and not visible through the UI.

The pages installed by the feature REM Publishing Pages are as follows.

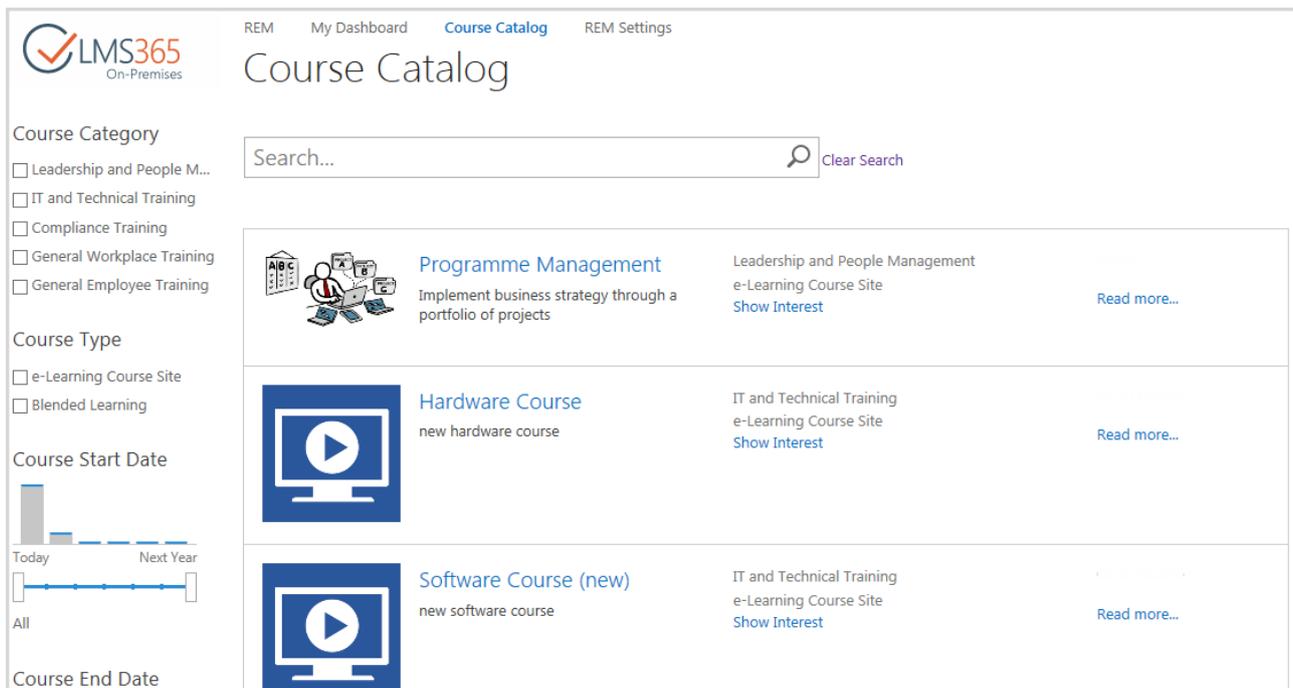

1.7.1 Welcome Page

Welcome.aspx is a home page for all type of users i.e. there is no redirection logic depending on users' permission (like in previous version). From the page users can search courses using search field, navigate to the Course Catalog Search page, to the My Dashboard (if enabled) and to the REM Settings page (Administration page is displayed for administrator role only) using links or icons:

1.7.2 Course Catalog Search Page

CourseCatalogSearch.aspx allows users to search and view courses available for enrollment, apply various search filters and navigate to the course details page:

Once the content is crawled it is possible to search courses by the following shared fields:

- Course Title;
- Course Type;
- Course Category;
- Course Short & Long Description;
- Course Competency;
- Course Materials;
- Teachers.

Default search filters that could be applied on this page:

- Course Category Refinement Panel shows links that by default apply filters by *Course Category* field from Courses list (it can be configured to any other list and any other managed metadata field from the list):

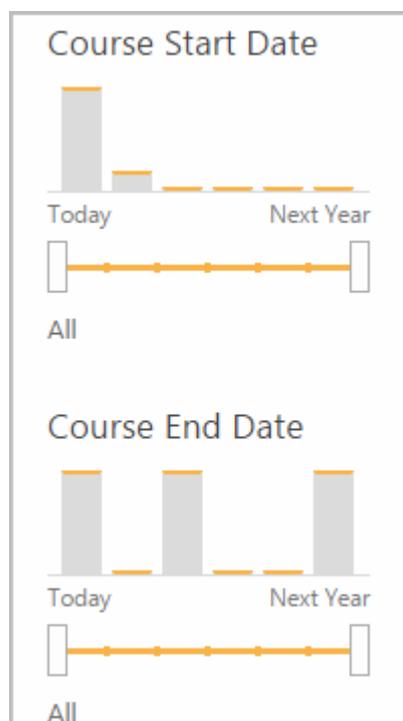

Course Category

- Compliance Training
- External Courses
- Developer training
- IT and Technical Training
- General Workplace Safety
- General Employee Training

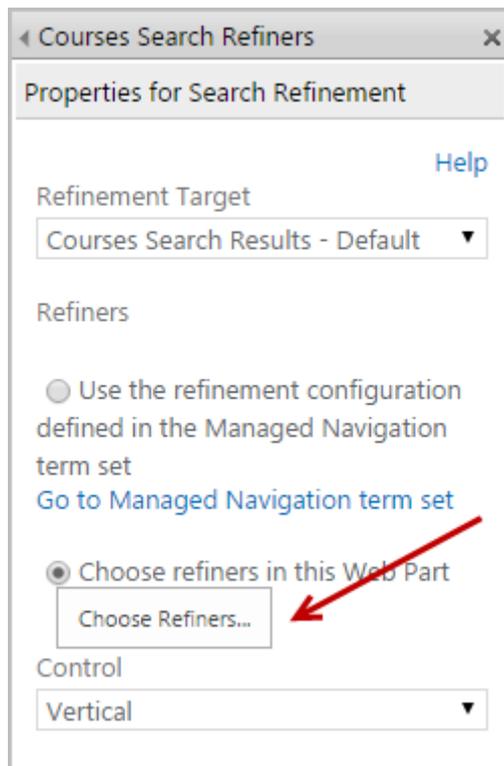

- Course Type Refinement Panel – shows links that by default apply filters by *Course Type* field from Courses list (it can be configured to any other list and any other managed metadata field from the list):

- Course Access Period filter allows applying filter by Course Offerings Access Start and End Dates:

To add other filters enter the page edit mode and change the settings of the Courses Search Refinement web part:

Choose additional Refiners to be added to filters:

Refinement configuration for 'Courses Search Refiners' ✕

The refiners will be displayed in the order listed.

1.7.3 REM Settings Page

REMSettings.aspx is a page that is intended for administration staff. The page has unique permissions and available for all REM groups except Learners and Visitors:

The screenshot shows the LMS365 On-Premises interface for the REM Settings page. The navigation bar at the top includes 'REM', 'My Dashboard', 'Course Catalog', and 'REM Settings'. The left sidebar contains 'REM Settings', 'Recent', 'Reports Library', and 'Site Contents'. The main content area is organized into three columns of links:

- Left Column:** Courses Views, Curriculums, Courses, Course Offerings, Users Tools, All Users, Registration Views, All Registrations, Not Invoiced, Invoiced, Registrations for the last 7 days, Enrollment Approval Required, Registrations for Today, Registrations for the last 30 days, Free, Paid, Coupon, Paid & Coupon, Registrations With Credits, Reports, Course Report, Curriculum Report, Project Team Report, User Report.
- Middle Column:** Common Tools, Enrollment Templates, Certificate Templates, All Certificates, External Certificates, Generate Name Cards, Invoice Templates, Text Templates, Email Templates, Course Interests, Coupons, User History, Rooms, Locations, Course Categories, Credits for Payment, Editable Teacher Columns, SCORM, Content Package Storage, All Content Packages, Line Management Tools, Enrollment Requests, Enrollment Requests Tasks.

NOTE: On newly created sites, Metadata Navigation and Filtering feature is activated by default, which allows creating a large number of users' registrations and avoid threshold limit excess error (when there are more users then set for List View Threshold) on Registrations list after registrations have been created.

On newly created sites, there is only one flat view with the combination of search-box and filters:

<p>Courses Views</p> <p>Curriculums</p> <p>Courses</p> <p>Course Offerings</p>	<p>Common Tools</p> <p>Enrollment Templates</p> <p>Certificate Templates</p> <p>All Certificates</p> <p>External Certificates</p> <p>Generate Name Cards</p> <p>Invoice Templates</p> <p>Text Templates</p> <p>Email Templates</p> <p>Course Interests</p> <p>Coupons</p> <p>Rooms</p> <p>Locations</p> <p>Course Categories</p> <p>Credits for Payment</p> <p>Editable Teacher Columns</p>
<p>Users Tools</p> <p>All Users</p>	<p>SCORM</p> <p>All Content Packages</p>
<p>Registration Views</p> <p>All Registrations</p>	<p>Line Management Tools</p> <p>Enrollment Requests</p> <p>Enrollment Requests Tasks</p>
<p>Reports</p> <p>Course Report</p> <p>Curriculum Report</p> <p>Project Team Report</p> <p>User Report</p>	

You can use User Key Filter on All Registrations list to filter necessary information:

Key Filters

User Name

More filters can be added in the List Settings > Metadata navigation settings > Configure Key Filters. Do not forget to check whether new Key Filters have been added to the Indexed Columns. If not, you should index new Key Filters manually. To do this, go to List Settings > Indexed columns > Create a new index > select needed column and click Create button.

1.7.4 Course Details Pages

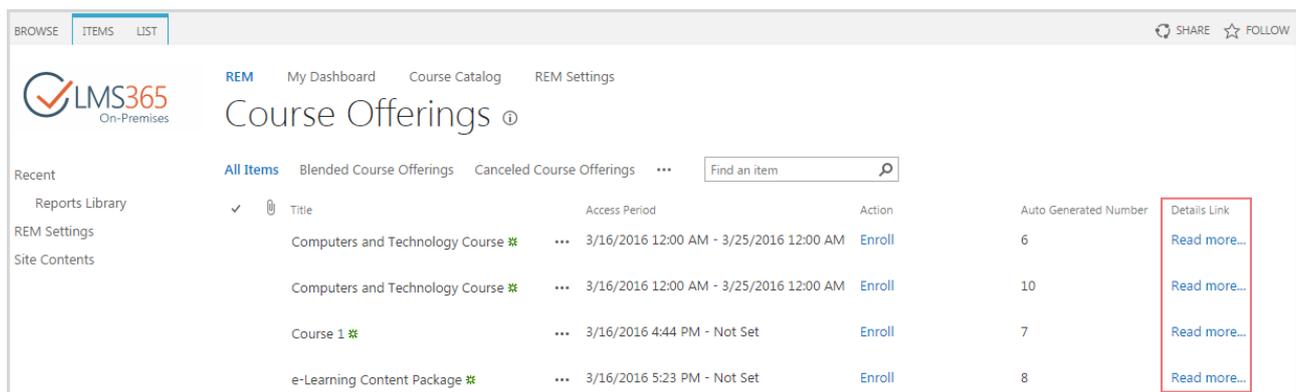

For each course the following pages are created:

- Course Details page - default landing page for displaying a course inside the Course Catalog containing an Enroll button and list of available course offerings;
- Course Offering Details page - landing page for the selected offering with public information;
- Registration Details page – landing page containing all available information about the enrolled course/offering enabling the Learner to access meeting information or the My Learning Web Part from this page.

These pages contain different web parts depending on course type.

1.7.5 Details Link Field

The Courses list and Course Offerings list contains several new fields that link to the Course Details and Course Offering Details page:

1.7.6 REM Update Text Templates

This is a hidden feature that is activated automatically with REM Publishing Pages. The feature creates new version of each text template from Lists/Text Templates library. Every text template contains text according to template meaning and has the following web parts:

1. Course Details;
2. Course Offering Details;
3. Go To Course Catalog.

After the ELEARNINGFORCE – REM: Publishing feature is deactivated the first version of text templates will be restored.

1.8 CCM Integration

The functionality of integration with SharePoint CCM allows granting particular personal competencies in CCM automatically for the users who complete REM course. To activate the feature, go to Settings > Site Settings > Site Collection Administration > Site Collection Features:

The functionality requires SharePoint CCM 2.1.1.x or higher. If SharePoint CCM is not installed or version of SharePoint CCM does not meet the version requirements, the SharePoint REM will continue working as before but the feature functionality will not be available.

The ELEARNINGFORCE – REM: CCM Integration feature installs the following content:

- 1) Makes field *Competencies* in the courses list available in all course types within the list. The field is available for editing when installed SharePoint CCM version meets the requirements.
- 2) Adds event receiver to the registrations list. The receiver checks whether the registration status is changed to *Course Completed*, and if true – the receiver ensures competency levels for the user.

After the feature is deactivated the field *Competencies* should be hidden and the receiver should be removed from the list.

1.9 Custom Enrollment Flow

Custom approval type is designed to give more control over the enrollment flow, and implement custom conditions for it depending on the needs of organization. Custom enrollment is based on support of SharePoint 2010 workflows (SharePoint 2010 workflow platform is installed automatically with SharePoint 2013 products).

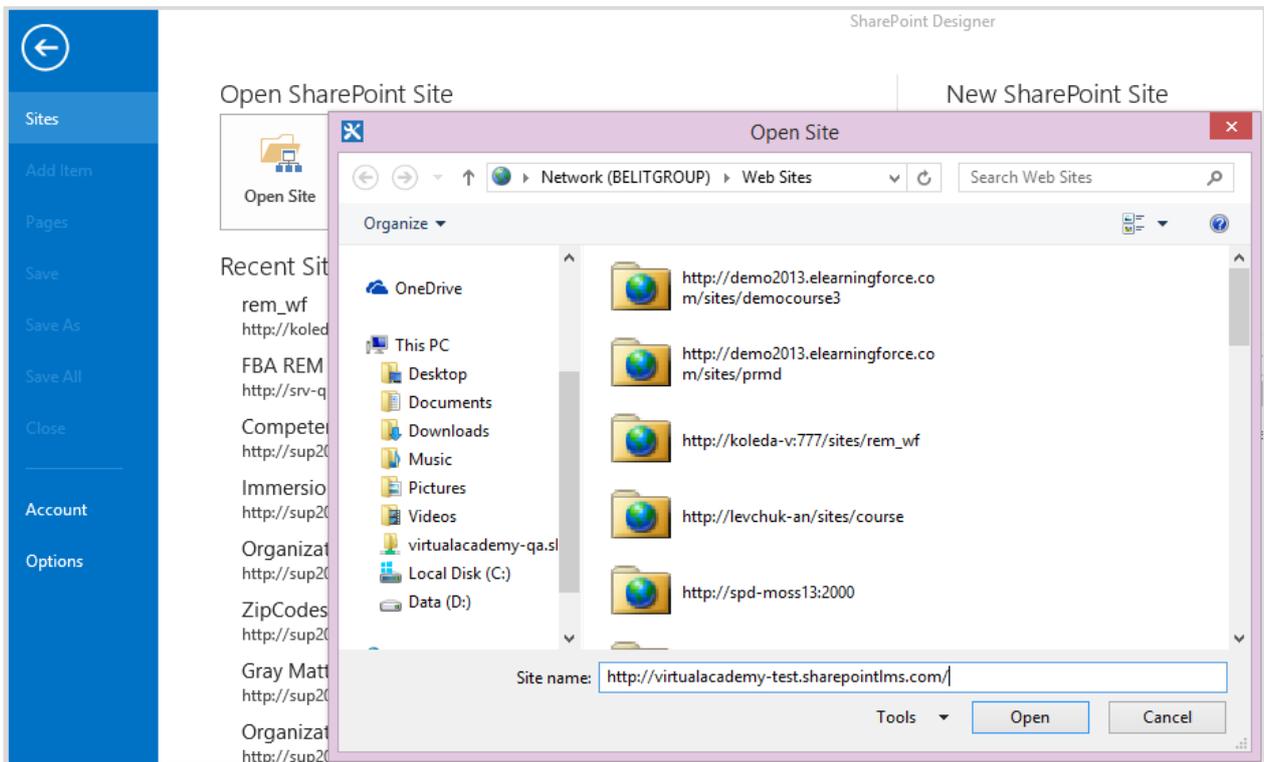

To configure a custom enrollment flow, create a SharePoint workflow first, and then attach it to the enrollment template. Study below-stated example of how to create an approval workflow in 2010 platform to have 'HR responsible' users approve enrollment requests before a registration is created. However, the feature is not limited to the functionality described in the example. It is possible to adjust a workflow depending on your needs e.g. set multiple groups for enrollment approval.

NOTE: You might need to activate the following features on REM site collection before creating a workflow:

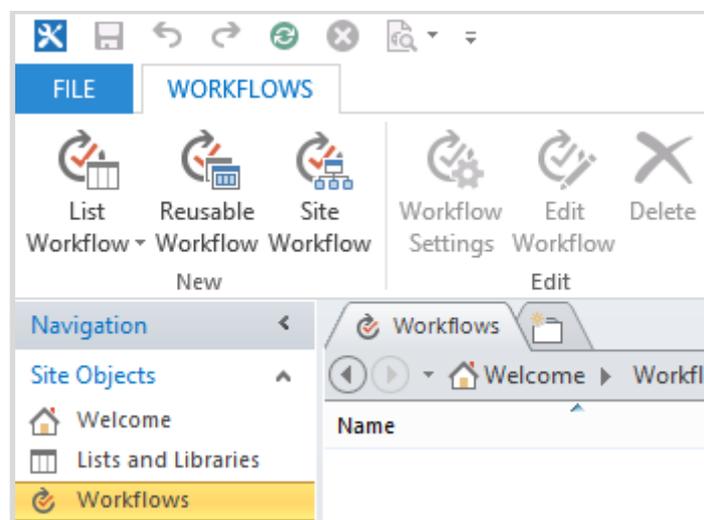

- 'SharePoint Server Standard Site features' site feature;
- 'SharePoint Server Standard Site Collection features' site collection feature;
- 'Workflows' site collection feature.

1.9.1 Creating SharePoint 2010 Workflow

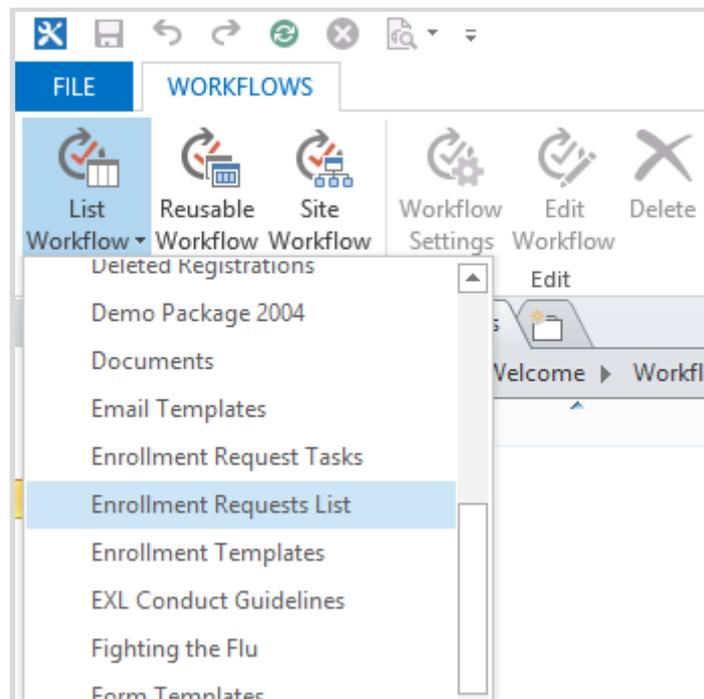

1. Open REM site in SharePoint Designer 2013:

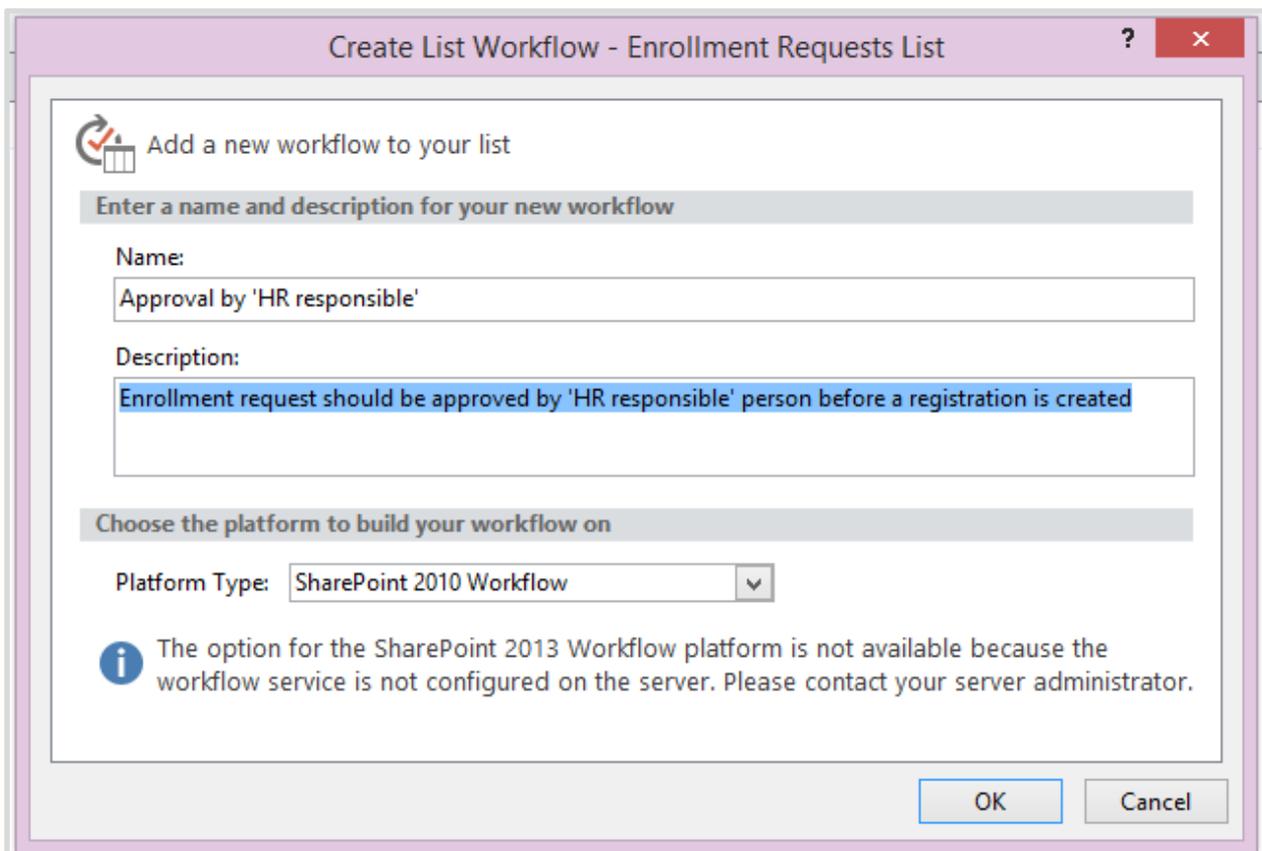

2. Go to 'Workflows' site object:

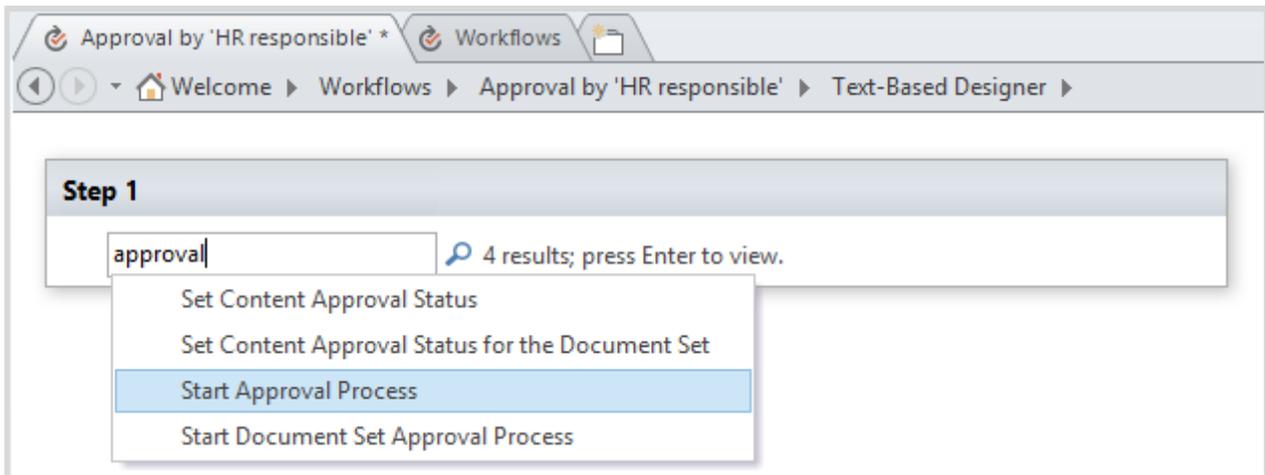

3. On the ribbon find 'List Workflow' action and select 'Enrollment Requests List':

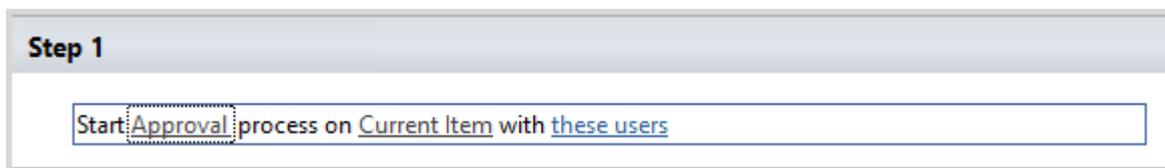

4. Create workflow and select 'SharePoint 2010 Workflow' in the Platform Type:

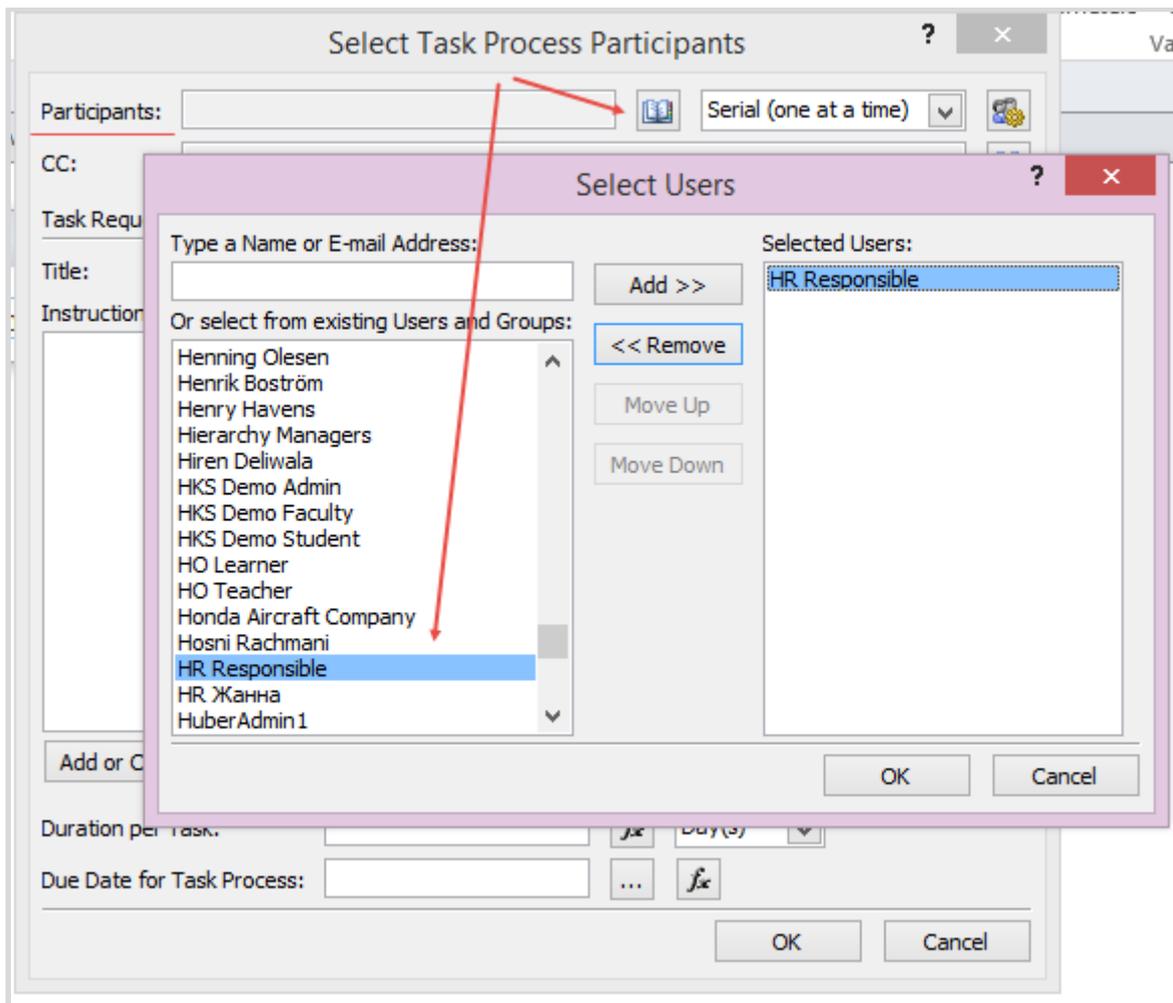

5. Select the 'Start Approval Process' action:

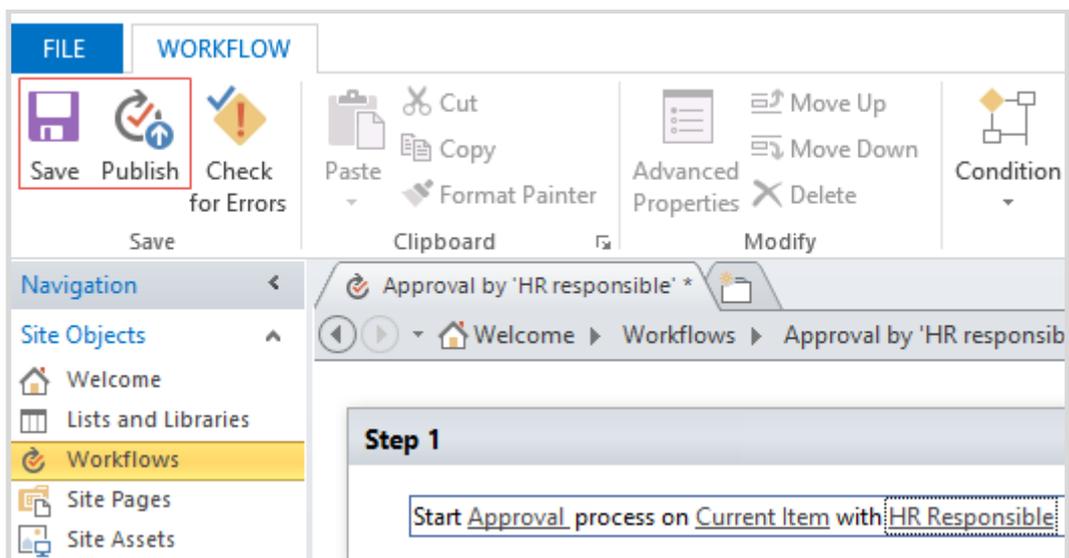

6. Configure the action. For this workflow, select 'HR responsible' group for approval of enrollment requests. Click 'these users' link:

Select the needed group:

7. Save and Publish the workflow:

1.9.2 Attaching workflow to enrollment template

1. Go to REM Settings > Enrollment Templates list, create new or modify existing enrollment template;
2. In the 'Approval Type' field choose 'Custom'. A new dependent field next to approval type will appear:

Approval Type	Custom
Approval Workflow	none

The system will display published workflows found on this site. Select the workflow created in the previous step:

Approval Type	Custom
Approval Workflow	Approval by 'HR responsible'

3. Save the changes.

1.9.3 Enrollment process

Example above uses default 'Enrollment Requests List' and 'Enrollment Requests Tasks' lists of the REM site to process the workflow. Once user is enrolled to a course that uses enrollment template with custom approval, the workflow is started and request task is created:

Enrollment Requests List ⓘ							
<input type="checkbox"/>	Title	Status	<input type="checkbox"/> User	Is Invoiced	<input type="checkbox"/> Managers	Enrollment Request Answer	Approval by 'HR responsible'
Course : Classroom training (1)							
<input type="checkbox"/>	R-11-Olivia Dunham <small>NEW</small>	Enrolled	<input type="checkbox"/> Olivia Dunham	No		Pending	In Progress

User who is assigned as 'HR responsible' in Olivia's profile in CCM has '**read**' permissions to the request.

NOTE: Request is not created if user who is meant to approve it is a member of group that is specified in 'People who can automatically approve registration requests' field of the enrollment template.
If workflow has multiple participants a task is created for each participant (participant group).

Tasks are created in the 'Enrollment Request Tasks' list:

<input type="checkbox"/>		Type	Title	<input type="checkbox"/>	Assigned To	Status	Priority	Due Date	% Complete	Predecessors	Related Content	Outcome
<input type="checkbox"/>			Please review R-11-Olivia Dunham NEW	<input type="checkbox"/>	HR Responsible	Not Started	(2) Normal				R-11-Olivia Dunham	

'HR responsible' user has **'contribute'** permissions to the task, and can approve it by clicking 'Approve' button on the view form:

Enrollment Request Tasks: Please review R-11-Olivia Dunham

Delete Item

This workflow task applies to [R-11-Olivia Dunham](#).

Status	Not Started
Requested By	SharePoint Install;
Consolidated Comments	Approval (5) started by SharePoint Install on 26/01/2016 08:25 Comment: These are the comments of the requestor and all previous participants.
Due Date	<input type="text"/>
Comments	<input type="text"/> This message will be included in your response.

The request status will be changed to 'Approved':

<input type="checkbox"/>		Type	Title	<input type="checkbox"/>	Assigned To	Status	Priority	Due Date	% Complete	Predecessors	Related Content	Outcome
<input type="checkbox"/>			Please review R-11-Olivia Dunham NEW	<input type="checkbox"/>	HR Responsible	Completed	(2) Normal		100%		R-11-Olivia Dunham	Approved

Registration will be created with status 'Enrolled' after approval is done:

Registrations ⓘ

<input type="checkbox"/>	Title	<input type="checkbox"/> User ▼	Status	Is Invoiced	Course Offering Status
⊕ Course : Barista exam (2)					
⊖ Course : Classroom Training (2)					
<input type="checkbox"/>	R-603- Olivia Dunham	<input checked="" type="checkbox"/> Olivia Dunham	Course Completed	No	Closed
<input type="checkbox"/>	R-749- Olivia Dunham	<input checked="" type="checkbox"/> Olivia Dunham	Enrolled	No	Active
NEW					

NOTE: The following rules apply to the approval process:

- Line manager and HR responsible can approve task(s) of own subordinates only;
- If a user does not have any managers, then LMS administrator should approve the request task;
- If a user has more than one 'HR responsible' manager, then one of them should approve the task (tasks are not created for each manager but for participant (participant group) of the workflow).

In case request task is rejected, its status is changed to 'Rejected', and registration is not created for the user:

Enrollment Request Tasks ⓘ

<input type="checkbox"/>	<input type="checkbox"/> Ⓜ	Type	Title	<input type="checkbox"/> Assigned To	Status	Priority	Due Date	% Complete	Predecessors	Related Content	Outcome
<input type="checkbox"/>	<input type="checkbox"/>		Please review R-11-Olivia Dunham NEW	<input type="checkbox"/> HR Responsible	Completed	(2) Normal		100%		R-11-Olivia Dunham	Approved
<input type="checkbox"/>	<input type="checkbox"/>		Please review R-13-Hank Moody NEW	<input type="checkbox"/> HR Responsible	Completed	(2) Normal		100%		R-13-Hank Moody	Rejected

1.10 Bulk Import External Certificates

Use the following PowerShell command to upload large number of external certificates:

```
Import-REMEExternalCertificates http://REM_host_URL -Path
c:\certificates.xlsx
```

NOTE: You can use optional parameter BatchSize to set the batch size (the default batch size is 100).

You can upload either an .xlsx (.xls files are not supported) or a .zip file.

- Fields that must be included in the imported .xlsx file: User Name, Course Name, Issued Date, Company, Expiration Date, Training Points, Competency Levels, Certificate Image or Certificate Template, Automatic Revocation. You can add 'Score' column to the .xlsx file as well (it is not required);

NOTE: The sample .xlsx file data is shown on a picture below:

	A	B	C	D	E	F	G	H	I	J	K
1	User name	Course name	Issued date	Train Company	Competency levels	Expiration date	Certificate image	Certificate template	Automatic revocation	Score	
2	example\red_2	ZIP	04.04.2016	150 BITS	c1-Poor	03.04.2017	Image.jpg		no		

- .zip file must include .xlsx file with all necessary information and certificate image. In the Certificate Image field specify corresponding image name from folder inside an archive (relative path defined in .xlsx);
- Use a default certificate template if other is not specified OR a full URL.

NOTE: Imported file is validated first and if there are any errors, you can download Error Log to see these errors. They can be as follows:

1. User name: User not found or inactive;
2. Completion date (issued date):
 - Date format not recognized;
3. Expiration date:
 - Date format not recognized;
4. Training Points:
 - Not correct format (not an integer);
 - Out of range (negative);
5. Competency: Competency does not exist;
6. Competency level: Competency level for associated competency does not exist;
7. Certificate image: Certificate template also defined;
8. Certificate template:
 - Certificate template not found;
 - Certificate image also defined.

1.11 REM Certificates Expiration feature

The functionality allows setup the expiration settings for certificates that users gained within the SharePoint REM courses.

NOTE: After the recertification process of e-learning and blended courses, along with the certificate expiration all learner's progress gained within these courses will be deleted.

The functionality is based on SharePoint LMS recertification API. The functionality is provided by the site collection feature called *ELEARNINGFORCE – REM: Certificates Expiration*. To activate the feature, go to Settings > Site Settings > Site Collection Administration > Site Collection Features:

After the feature is activated, the following content is installed / changed:

➤ Changes to SharePoint REM Courses List:

- 1) *Certificates Expiration* field. The field allows configuring expiration and email notification settings via new/edit forms of REM online courses/online classrooms;
- 2) *Certificates Expiration Mode* field. The field is read only and changed by system only. The value of this field is integer number that represents mode of certificate expiration:
0=Never, 1=X Days After Completed, 2 = Expiration Date;
- 3) *Certificates Expiration Days After Completed* field. The field is read only and changed by system only. The value of this field represents number of days after completed after which certificate will be expired. The value of the field is used when expiration mode is *X Days After Completed*;
- 4) *Certificates Expiration Date* field. The field is read only and change by system only. The value of this field represents particular date when course certificates must be expired.

➤ Changes to the Email Templates:

- 1) *Certificate Is Expiring Reminder* email template. This is a new type of email template that intended to notify users about the certificate of particular user would be expired soon. The email from this template will be sent to the users according to the email settings (configured in the *Certificates Expiration* field) before certificate expiration. The default email template should contain macros *{registrations:certificate_expiration_date}* that will be replaced by particular expiration date.

Number of days prior to send reminder is configured via *Certificates Expiration* field:

Email Notification Settings

Send email reminder days before expiration.

If the text box is empty, the reminder will not be sent.

If nothing is selected in *Send email to* section, the email will not be sent:

Send email to:

User: Site Administrator: Line Manager:

Other Users:

- 2) *Certificate Is Expired* email template. This is a new email template intended to notify users that certificate has been expired. The email from this template will be sent to the users

according to the email settings (configured in the *Certificates Expiration* field) right after certificate expiration.

If nothing is selected in *Send email to* section, the email will not be sent.

- Changes to the Enrollment Templates:
 - 1) New Email templates should appear in the *Email Templates Configuration* field.
- Changes to the Registration list:
 - 1) New registration status *Certificate Expired*. This status is set by system only. The status is not active;
 - 2) *Course Completed Date* field. The field stores date of course completion (i.e. date when registration gets status Course Completed).

NOTE: Registrations with *Course Completed* status that had been created in the version earlier than 4.1.0.16 will have empty value for this field.

- 3) *Reminded Of Certificate Expiration* – this is a Boolean field that stores whether the *Certificate Is Expiring Reminder* was sent for the particular registration.

The process of recertification in REM is described below:

- 1) User is assigned *Course Completed* status – system sets *Course Completed Date*;
- 2) Recertification process is run by *Course Offering Daily Maintainer Job*. The job runs every day and gets registrations that require recertification. If registrations exist, the job will change their status to *Certificate Expired*;
- 3) The reminder emails are sent to the users according to the configured settings by *Course Offering Daily Maintainer* as well;
- 4) The changes in the *Certificate Expiration* field should be considered for registrations that were created before the changes.

NOTE: Consider the following sequence of facts:
Course 1 has expiration settings: 2 days after completed
 User Enrolls to the *Course 1* and completes the course. Therefore, the registration status is *Course Completed*. His certificate should be expired after 2 days.
 At this day certificate expiration settings for *Course 1* is changed: 5 days after completed
Result:
 The registration should get status *Certificate Expired* according to the new settings (5 days after completed).

1.12 Delete REM Application Host

To delete REM site collection, do the following:

1. Go to Central Administration > Application Management > Delete Application Host:

ELEARNINGFORCE – SharePoint REM

[Create Application Host](#) |
 [Manage Application Host](#) |
 [Delete Application Host](#)
